

Gas Chromatography
Capillary Column
Application Data

SHINWA CHEMICAL INDUSTRIES LTD.

ULBON Series

The capillary column performs very higher separation than the packed column because of the small diffusion and good permeability of the sample. The fused silica capillary column coated polyimide resin on the outside of tubing was developed in around 1980. The inert surface and flexibility of fused silica tubing lead to high performance separation and easy handling. To satisfy your analytical requirement, we are preparing various columns including the chemical bonding (HR) and wall coated types (WCOT).

Products List of Capillary column

| | HR (Chemical Bond) | | WCOT (Wall Coated Open Tubular) | |
|----------------------|--|---|---|-----------------|
| | Fused Silica | Inactive Processed Stainless Steel Tube | Fused Silica | Stainless Steel |
| General Purpose Type | ULBON HR-1 ULBON HR-52 ULBON HR-17 ULBON HR-1701 ULBON HR-20M | | | |
| Special Type | ULBON HR-SS-10 ULBON HR-Thermon-3000B ULBON HR-Thermon-600T ULBON HR-Thermon-HG | ULBON HR-TGC1 | ULBON ALPhen ULBON DMN 267 ULBON PLC ULBON Xylene Master ULBON Advance-DS ULBON FFAP | ULBON SPX-1 |

“ULBON” is a generic name of the Shinwa capillary columns.

“ULBON HR” is a generic name of the Shinwa capillary columns with chemical bonding layer.

| Column | Type | Feature | Material |
|-------------------|----------------------------|--|---|
| ULBON HR Series | The chemical bond layer | ULBON HR series are capillary columns chemically bonded between silica surface and stationary phase. | Fused silica covered with polyimide resin Inactive processed stainless steel |
| ULBON WCOT Series | Wall Coated (Open Tubular) | Capillary column coated with stationary phase on the inner wall. | Fused silica covered with polyimide resin Stainless steel |

ULBON HR Series

We have ten types of stationary phases for general analysis and each analytical purpose, as an ULBON HR series. We also stock the columns with various lengths, inner diameter and the film thickness of stationary phase for your requirement.

Characteristics

1. The inert inner surface of the column results in high quantitative analysis.

The adsorption point of the inner surface of the column has been completely removed by a rigid treatment. Therefore, free acid and free amine which are easily adsorbed are eluted without interaction with the active surface.

2. No exfoliation and bleeding of stationary phase lead to high sensitive analysis .

In HR series column, the rigid chemical bonding is treated on the surface, therefore there is almost no exfoliation and bleeding of stationary phase. No bleeding from the column results in the high sensitive analysis.

3. The maximum temperature is higher than that of ordinary WCOT column.

The maximum temperature of HR-20M (correspondence to PEG-20M) is 240 °C and HR-silicone series are 330 °C (except HR-1701 and HR-17). The maximum temperature of chemical bond type column rises about 70 °C compared with the WCOT type.

Capillary Column for General Purpose

For general analysis, we have five types of capillary columns chemically bonded with stationary phases having non-polar to polar.

ULBON HR-1 (Corresponding OV-1, OV-101)

ULBON HR-52 (Corresponding SE-52)

ULBON HR-17 (Corresponding OV-17)

ULBON HR-1701 (Corresponding OV-1701)

ULBON HR-20M (Corresponding PEG-20M)

Capillary Column for Special Purpose

These capillary columns are coated with our original stationary phase developed for the special analytical purpose. A series of column is higher sensitivity and separation compared with the general analytical purpose type column.

1. For Fatty Acid Methyl Ester Analysis

ULBON HR-SS-10

ULBON HR-Thermon-3000B

The analysis of fatty acid methyl ester by the capillary column in GC is an important method in the field of biochemistry. Especially, the separation of *cis*, *trans* isomer and a regioisomer is indispensable for the analysis of the fatty acid ester.

Our company put **ULBON HR-SS-10** and **ULBON HR-Thermon-3000B** * on the market as a capillary column only for the analysis of fatty acid ester.

2. Excellent resolution for Perfumes and Refined Oils

ULBON HR-Thermon-600T

It is indispensable to use the capillary gas chromatography, when essential oil and the perfumes are analyzed. The major component of essential oil and perfumes are terpenes, hydrocarbon having chain or cyclic structure of chemical formula of $(C_5H_8)_n$, and its derivatives which are chemically unstable alcohols, aldehydes and ketones.

It is necessary for the analysis of essential oil and perfumes that the chemical bond and technical inert treatment is perfectly performed. The stable and good technical treated column results in a high sensitive and a quantitative analysis. As an original capillary column for the essential oil and perfume, we recommend **ULBON HR-Thermon-600T** for your work.

3. For the Analysis of Organic Mercury (Methyl and Ethyl Mercury) and Tributyl Tin

ULBON HR-Thermon-HG

ULBON HR-Thermon-HG is the best column for the analysis of the organic mercury that has already been regulated and the harmful substances such as tributyltin used for the stain-proofing agent of fishing net and the ship bottom paint.

In the analyses of TBTC (Tributyltin chloride) and alkylmercury, the use of packed column results in the poor reproducibility of the separation because of the adsorption to the material.

The adsorption phenomenon is extremely few on the **ULBON HR-Thermon-HG**, the high sensitive and reproducible quantity analysis are possible. ULBON HR-Thermon-HG is excellent separation abilities in the analysis of Tributyltin chloride compared with packed column because of the no adsorption phenomenon.

4. For the Analysis of Triglyceride (Stainless inside is processed inert treatment)

ULBON HR-TGC1

The separation of triglyceride in the high boiling point range is difficult on the ordinary polyimide coated capillary column. However, triglyceride can be analyzed with stainless steel capillary column that has processed inert treatment inside and the newly developed heat-resistance stationary phase.

ULBON WCOT Series**5. For Alkyl Phenol Analysis****ULBON ALPhen**

Isomers of the alkyl phenol compounds such as cresol, xylenes and ethyl phenols which are known to difficult substances to analyze can be completely separated with ULBON ALPhen.

1. All isomers of xylene (six isomers) can be separated on the ULBON ALPhen, especially 2,4-Xylenol and 2,5-Xylenol are resolved completely.
2. The separation of the isomers of the cresol and the ethyl phenol is excellent.

ALPhen can offer you the best analysis of the alkyl phenol mentioned above.

6. For 2,6-, and 2,7-Dimethylnaphthalene Analysis**ULBON DMN267**

Dimethylnaphthalene have ten isomers. Of ten isomers, the chemical and physical characteristics of 2,6-DMN and 2,7-DMN is very similar. The two isomers can be separated on the ULBON DMN267 (WCOT type).

ULBON DMN267 has the following characteristics.

1. Maximum operation temperature is 160 °C. ULBON DMN267 is stable column.
2. The column life is long.

7. For Dimethylnaphthalene Isomers Analysis**ULBON PLC**

Recently, high purity 2,6-Dimethylnaphthalene (DMN) has attracted attention as a high functional raw material of heat-resistance and the high strength resin. There are ten isomers of DMN. Because of the similar physical and chemical characteristics of DMN, the separation of 2,6-DMN and 2,7-DMN is especially difficult in gas chromatography. **ULBON PLC** is a capillary column to separate all isomers of DMN completely.

The stationary phase of **ULBON PLC** is a liquid crystal phase developed by our technical group. The operation temperature range (the appearance of liquid crystal state) as the stationary phase is 150-160 °C, and a fine separation of 2,7-DMN, 1,3-DMN and 2,6-DMN can be obtained by the proper control of the oven temperature.

To maintain good column performance, please take care of the following points.

1. Please analyze efficiently to prevent the deteriorate of stationary phase.
2. When the analysis is temporarily interrupted, please adjust the temperature of the column oven to 50 °C or less or stop the apparatus without stopping the carrier gas.
3. As for the carrier gas, nitrogen is more excellent than helium in the point of the separation and the detection sensitivity.

8. For Xylene Isomers Analysis**ULBON Xylene Master**

1. Xylene Master shows excellent separation because of the about 1.1 relative retention value for the isomer of xylene.
2. The large separation capacity of Xylene Master capillary column and the inactive surface of fused silica used as a base material lead to perform the trace analysis of several ppm.
3. The maximum operation temperature is 160 °C. The heat-resistance of Xylene Master is higher than that of the stationary phase of phthalic acid ester for general analysis. Therefore, the analysis of the alkyl benzene isomer with a high boiling point is also applicable.

ULBON SPX-1 (SUS)

1. For the separation of impurities (for instance, *m*-xylene, Cumene and etc.) of *p*-xylene.
2. SPX-1 is a stainless steel (SUS) capillary column coated with stationary phase of the halogenation phthalic acid ester structure (WCOT) .
3. As for the analysis of *m*-xylene in *p*-xylene, the capillary column analysis is said to be a very difficult analysis so that *p*-xylene is eluted and then *m*-xylene in a usual GC analysis. Especially, small amount analysis of *m*-xylene is said to be an extremely difficult. *m*-Xylene of a small amount in front of *p*-xylene is eluted on the SPX-1. Therefore, the quantitative analysis is possible.

ULBON Series

Specification

ULBON HR Series (General purpose type)

| Column | Stationary Phase | Polarity | Maximum Temperature | Usage |
|--------------------------------------|--|----------|---------------------|--|
| HR-1 (Corresponding OV-1, OV-101) | Dimethyl silicone resin | Non | 330 | General analysis |
| HR-52 (Corresponding SE-52) | 5%Phenylmethyl silicone | Low | 330 | General analysis |
| HR-17 (Corresponding OV-17) | 50%Phenylmethyl silicone | Mid | 300 | Medicine, saccharide, TMS derivatives, phenols, steroids, and solvents |
| HR-1701 (Corresponding OV-1701) | 14 % Cyanopropyl phenylmethyl silicone | | 280 | |
| HR-20M (Corresponding PEG-20M) | Polyethyleneglycol | High | 240 | General analysis, polar compounds, esters, ketones and alcohols |

ULBON HR Series (Special purpose type)

| Column | Stationary Phase | Polarity | Maximum Temperature | Usage |
|------------------|---|----------|---------------------|---|
| HR-SS-10 | Nitrile silicone | High | 220 /230 | Fatty acid ester (especially, geometric isomer of C1=18 and C2=18) |
| HR-Thermon-3000B | Phthalic acid ester | High | 220 /230 | Fatty acid esters (analysis of unsaturated C20) |
| HR-Thermon-600T | Phthalic ester | High | 240 | Essential oil, Perfume |
| HR-Thermon-HG | Alkyleneglycol Phthalic acid ester polymer | High | 160 | Methylmercury, Ethyl mercury, Tributyl tin |
| HR-TGC1 | Phenylmethyl silicone | Low | 360 /390 | Triglyceride |

ULBON WCOT Series (Original)

| Column | Maximum Temperature | Usage |
|---------------|---------------------|--|
| ALPhen | 160 | Alkyl phenols |
| DMN 267 | 160 | Dimethylnaphthalenes (separation of 2, 6- DMN, 2, and 7- DMN) |
| PLC | 160 | Separation of all isomers of dimethylnaphthalene |
| Xylene Master | 160 | Separation of isomer of xylan |
| Advance-DS | 220 | Fatty acid methylic esters |
| FFAP | 180 | Lower free fatty acids |

ULBON WCOT Series (SUS)

| Column | Maximum Temperature | Usage |
|----------|---------------------|---|
| SPX-1 | 110 | <i>m</i> -Xylene in <i>p</i> -Xylene The exclusive column for xylene isomer analysis |
| Squalane | 70 | Hydrocarbon (Rigroin) The exclusive column for low hydrocarbon analysis |

Hydrocarbons

Alkyl benzene isomers

Column : ULBON Xylene Master 50 m x 0.32 mm I.D.

Column temp : 70 ~ 120 Program rate 2 /min

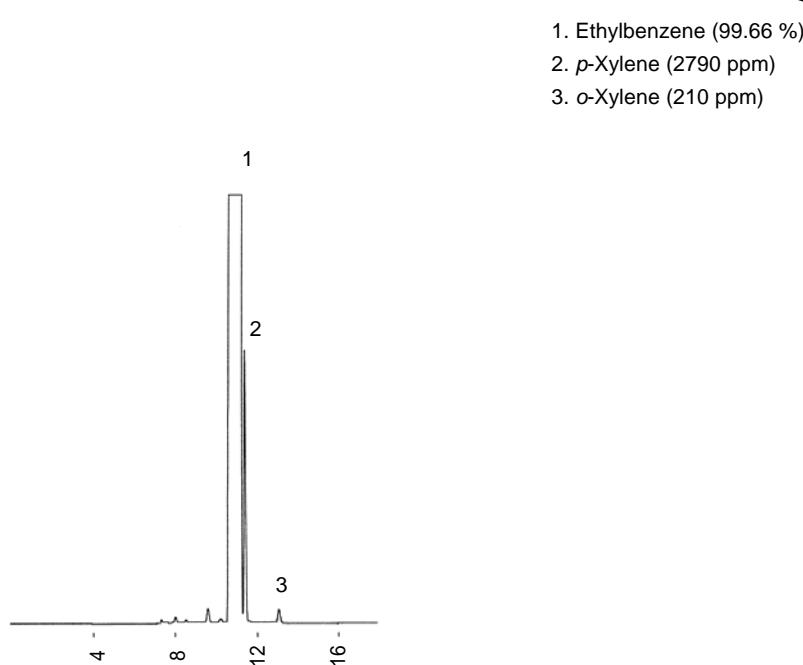

Injection : 200 (Sprit ratio: 29:1)

Detector : FID (200)

Carrier gas : He, 1.4 mL/min

Sample Volume: 1.0 μ L

Ethylbenzene

Column : ULBON Xylene Master 50 m x 0.32 mm I.D.

Column temp : 70

Injection : 200 (Sprit ratio: 55:1)

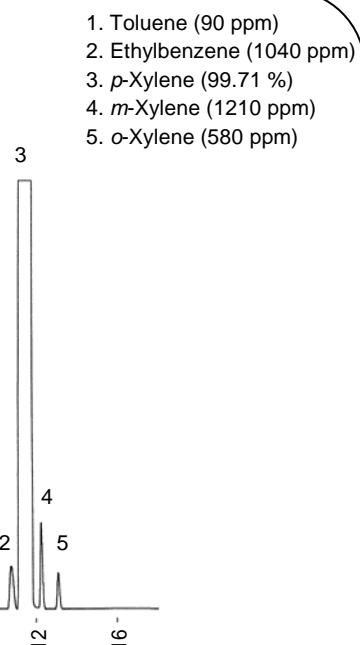

Detector : FID (200)

Carrier gas : He, 1.2 mL/min

Sample Volume: 1.0 μ L

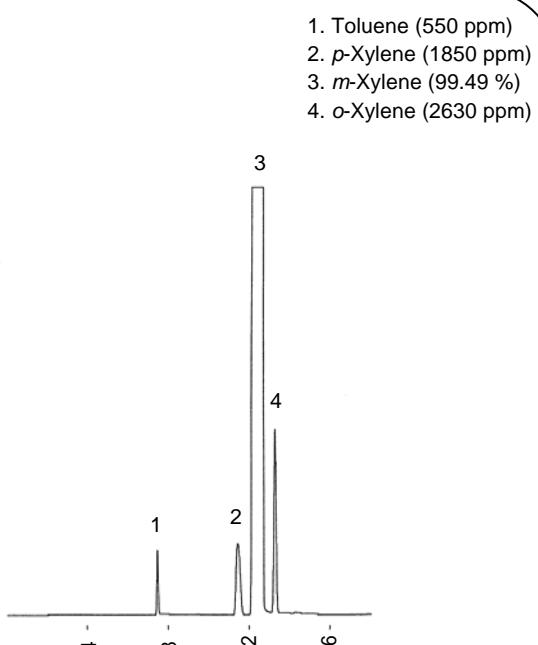

Hydrocarbons

p-Xylene

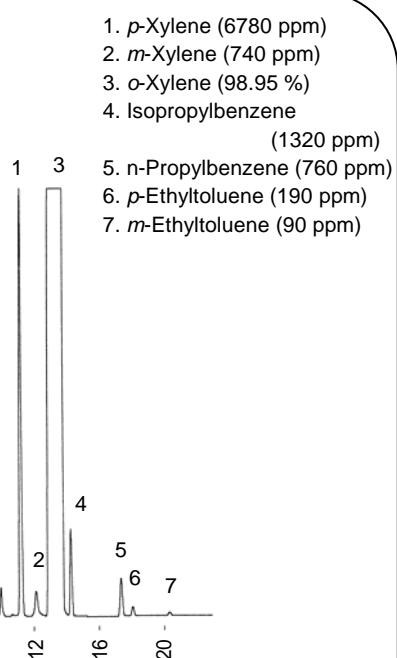

Column : ULBON Xylene Master 50 m x 0.32 mm I.D.
 Column temp : 70
 Injection : 200 (Spirit ratio: 55 :1)
 Detector : FID (200)
 Carrier gas : He, 1.2 mL/min
 Sample Volume: 1.0 μ L

m-Xylene

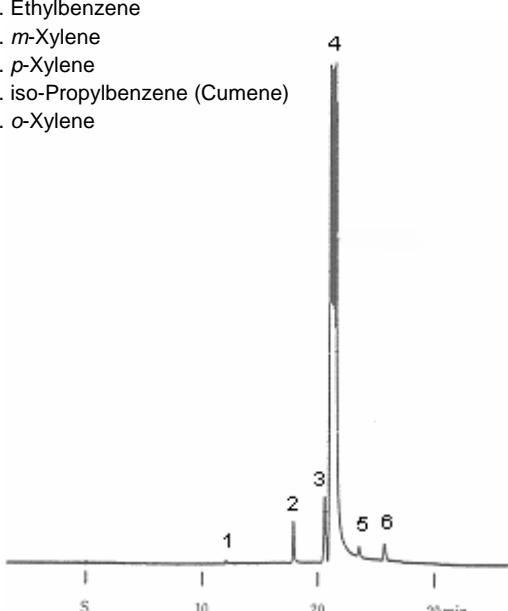

Column : ULBON Xylene Master 50 m x 0.32 mm I.D.
 Column temp : 70
 Injection : 200 (Spirit ratio: 55 :1)
 Detector : FID (200)
 Carrier gas : He, 1.2 mL/min
 Sample Volume: 1.0 μ L

o-Xylene

Column : ULBON Xylene Master 50 m x 0.32 mm I.D.
 Column temp : 70
 Injection : 200 (Spirit ratio: 55 :1)
 Detector : FID (200)
 Carrier gas : He, 1.2 mL/min
 Sample Volume: 1.0 μ L

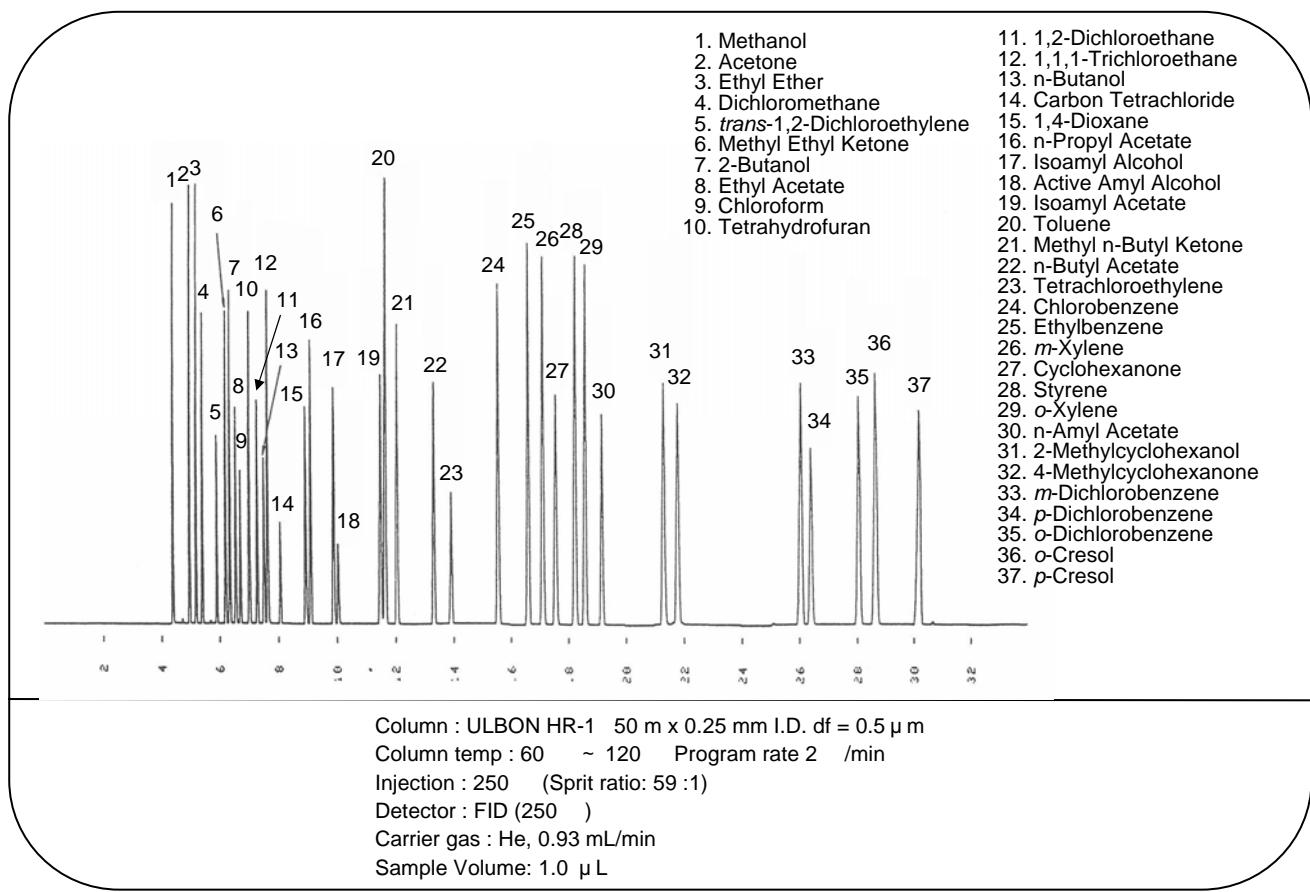

m-Xylene in *p*-Xylene

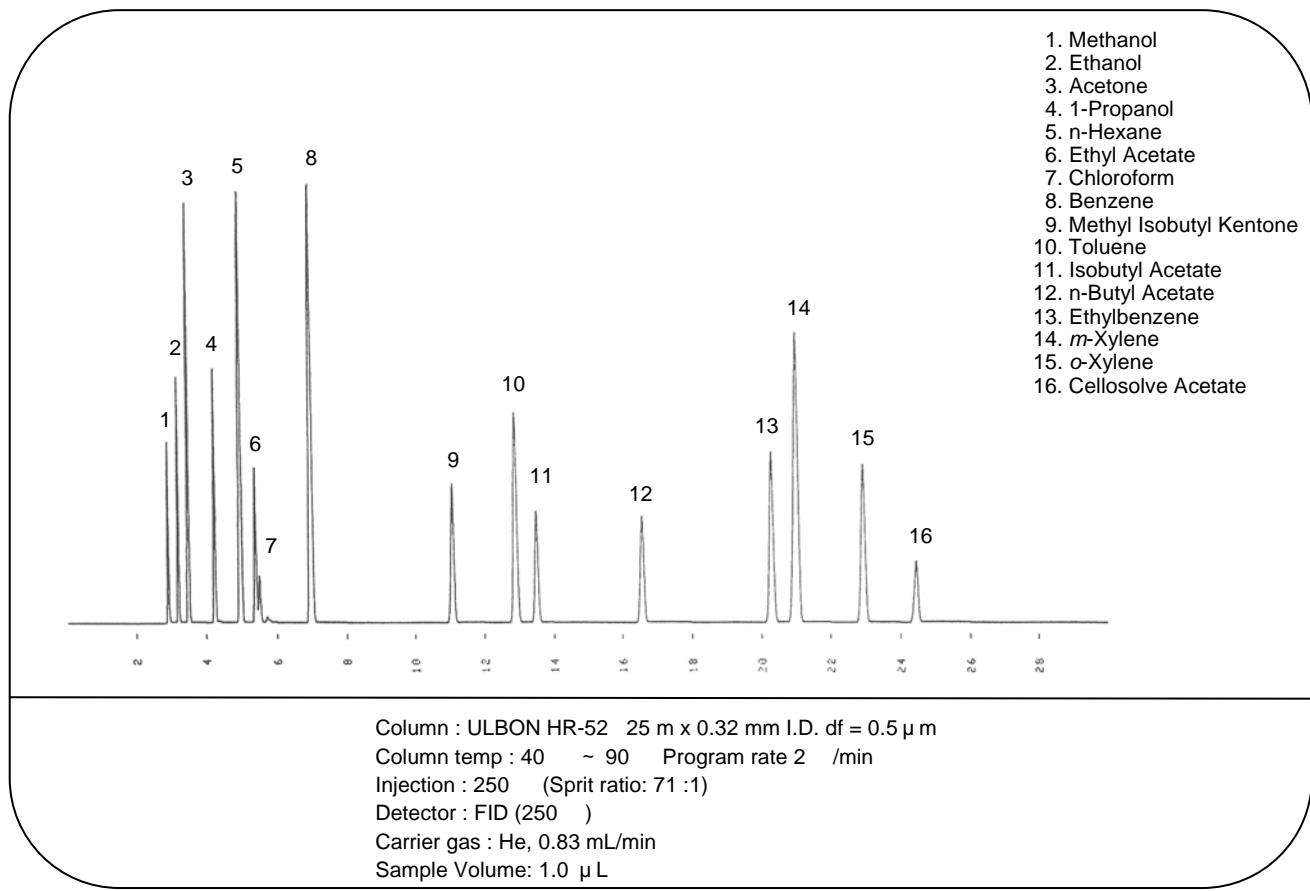

Column : ULBON SPX-1 60 m x 0.25 mm I.D.
 Column temp : 80
 Injection : 200 (Spirit ratio: 55 :1)
 Detector : FID (200)
 Carrier gas : He, 1.1 mL/min
 Sample Volume: 1.0 μ L

Alcohols

Higher alcohols in Calnaubawax

Column : ULBON HR-52 25 m x 0.25 mm I.D. df = 0.25 μ m

Column temp : 200 ~ 320 Program rate 5 /min

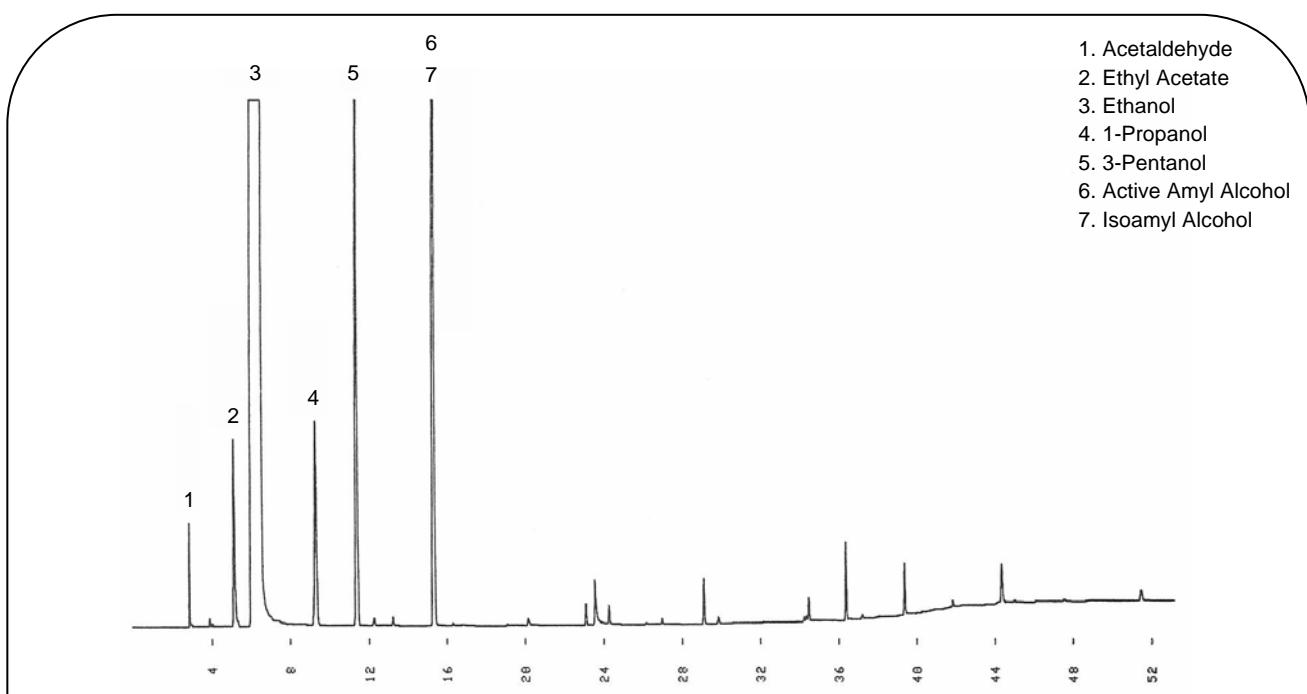

Injection : 330 (Spirit ratio: 66 :1)

Detector : FID (330)

Carrier gas : He, 0.5 mL/min

Sample Volume: 1.2 μ L

Scotch whisky

Column : ULBON HR-20M 50 m x 0.32 mm I.D. df = 1.0 μ m

Column temp : 60 ~ 240 Program rate 5 /min

Injection : 250 (Spirit ratio: 10 :1)

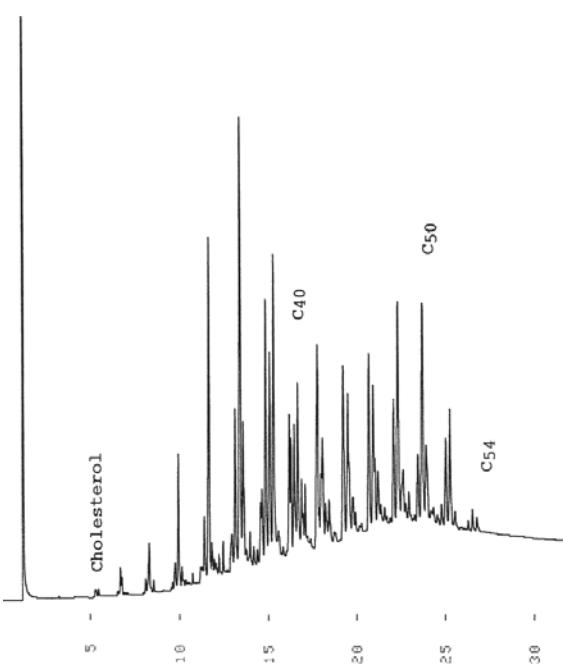

Detector : FID (250)

Carrier gas : He, 4.0 mL/min

Sample Volume: 0.6 μ L

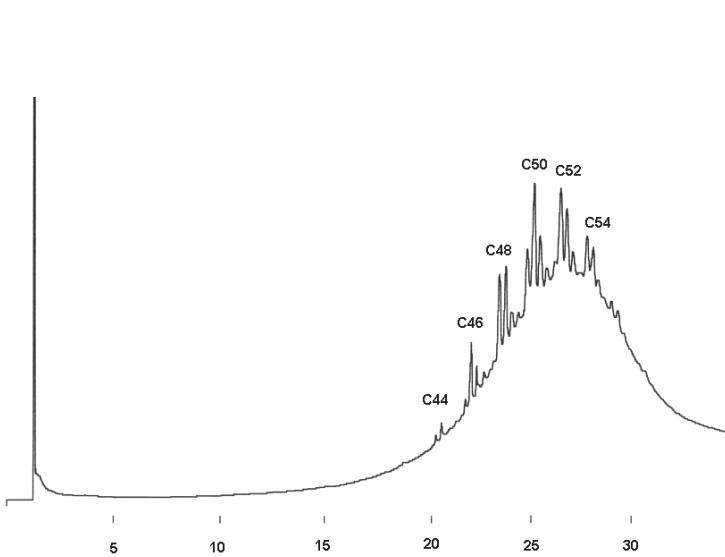

Triglyceride

Butter

Column : ULBON HR-TGC-1 30 m x 0.25 mm I.D.
Column temp : 250 ~ 380 Program rate 5 /min
Injection : 380 (Spirit ratio: 45 :1)
Detector : FID (380)
Carrier gas : He, 1.5 mL/min
Sample Volume: 1.0 μ L

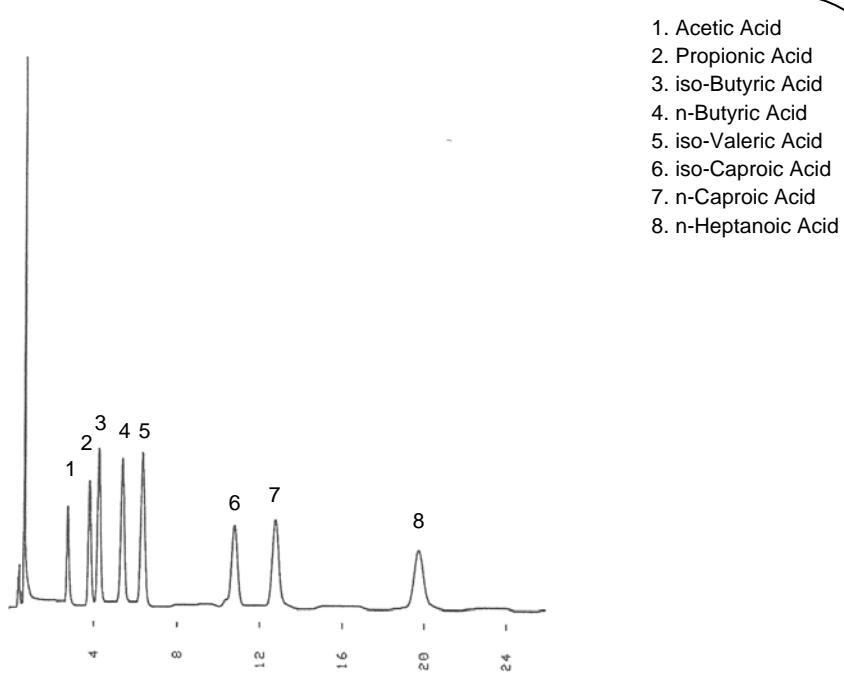

Salmon oil

Column : ULBON HR-TGC-1 30 m x 0.25 mm I.D.
Column temp : 25 ~ 380 Program rate 5 /min
Injection : 380 (Spirit ratio: 45 :1)
Detector : FID (380)
Carrier gas : He, 1.5 mL/min
Sample Volume: 1.0 μ L

Fatty Acids and Esters

Lower fatty acids in water

Column : ULBON HR-20M 30 m x 0.53 mm I.D. df = 3.0 μ m

Column temp : 150

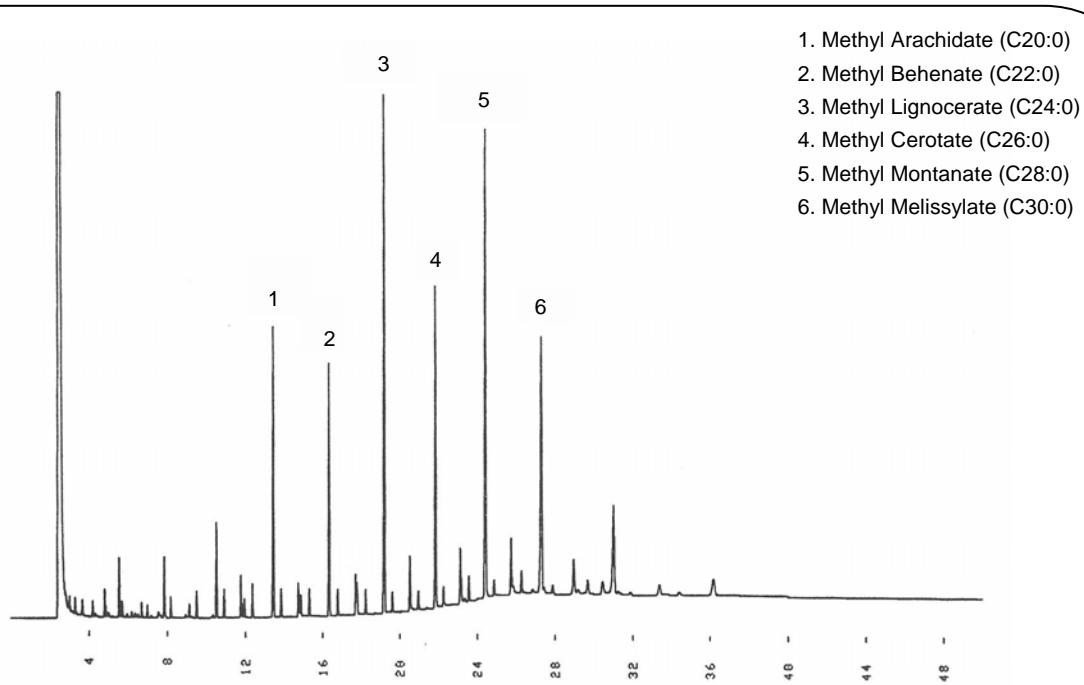

Injection : 250 (Direct)

Detector : FID (250)

Carrier gas : He, 10.5 mL/min

Sample Volume: 0.4 μ L

Higher fatty acid esters in Calnaubawax

Column : ULBON HR-52 25 m x 0.25 mm I.D. 0.25 μ m

Column temp : 200 ~ 320 Program rate 5 /min

Injection : 330 (Spirit ratio: 61 :1)

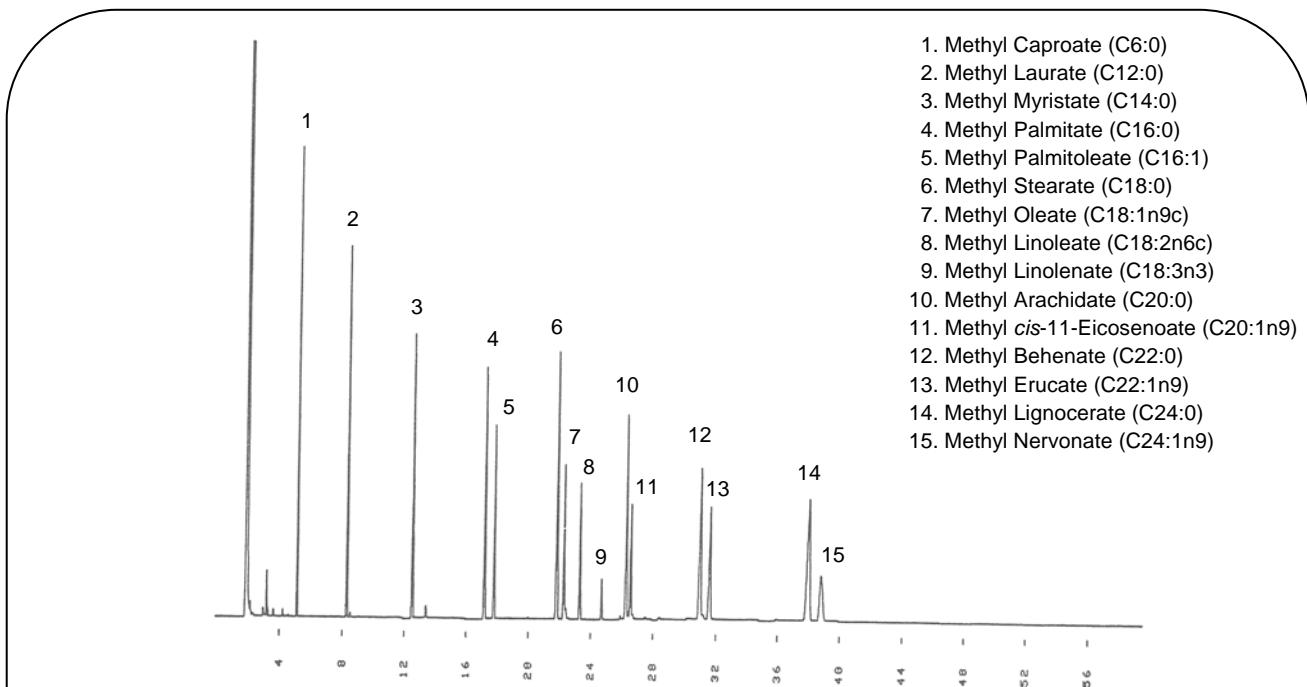

Detector : FID (330)

Carrier gas : He, 0.5 mL/min

Sample Volume: 1.0 μ L

Fatty Acids and Esters

Fatty acid methyl esters

Column : ULBON HR-20M 25 m x 0.25 mm I.D. df = 0.25 μ m

Column temp : 130 ~ 240 Program rate 4 /min

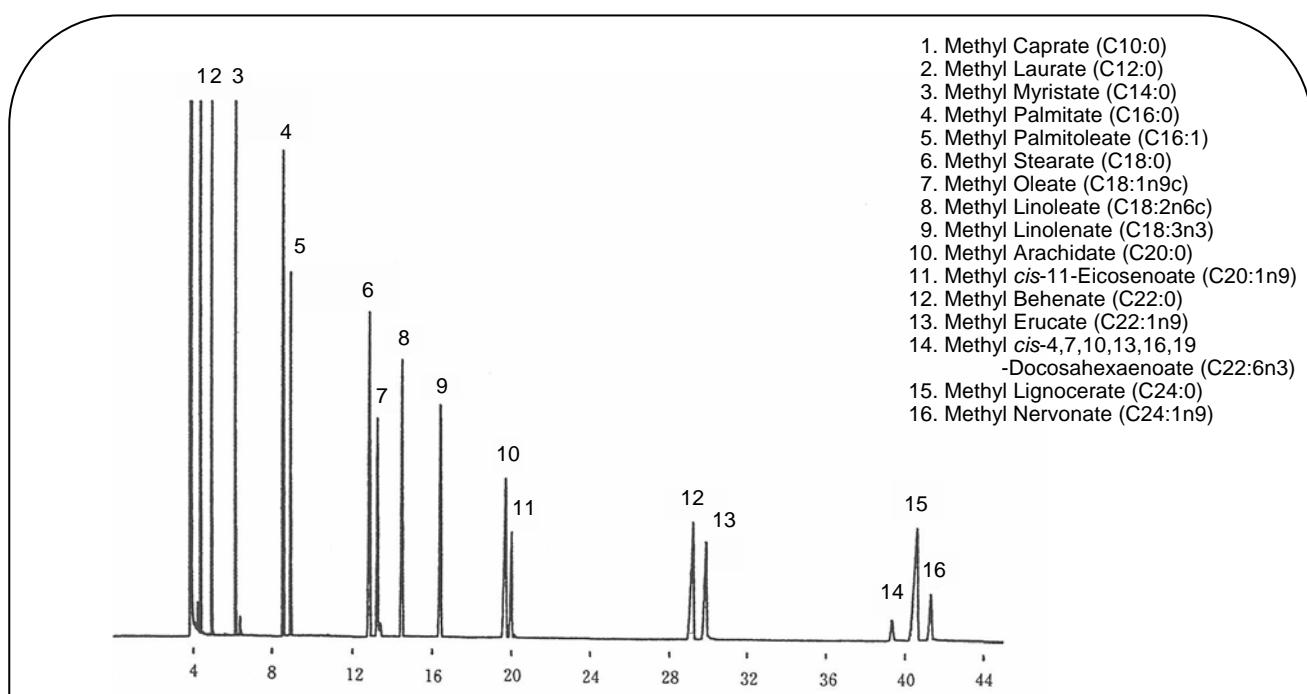

Injection : 250 (Sprit ratio: 40 :1)

Detector : FID (250)

Carrier gas : He, 1.1 mL/min

Sample Volume: 1.0 μ L

Fatty acid methyl esters standard

Column : ULBON HR-Thermon-3000B 50 m x 0.25 mm I.D.

Column temp : 180 ~ 220 Program rate 1 /min

Injection : 250 (Sprit ratio: 50 :1)

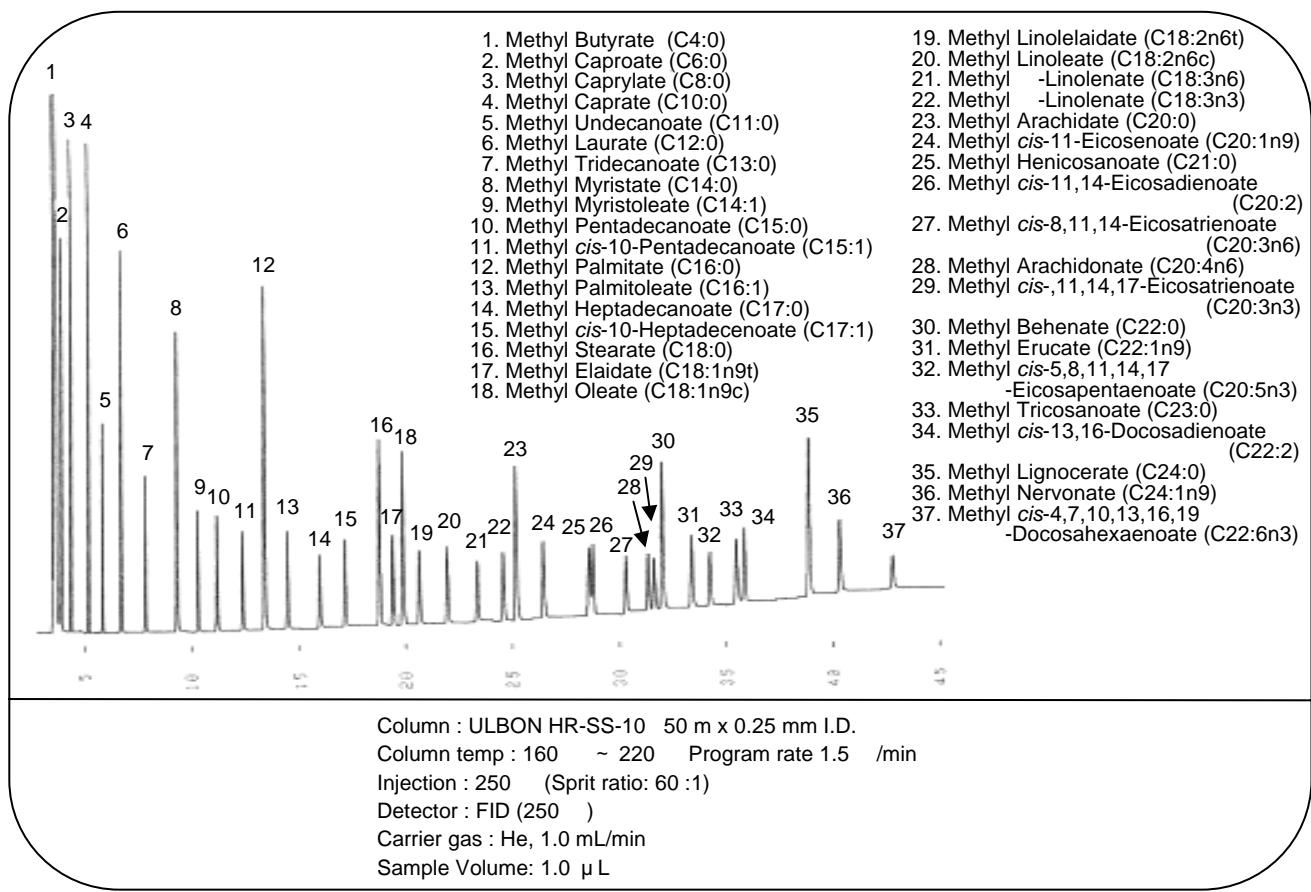

Detector : FID (250)

Carrier gas : He, 1.7 mL/min

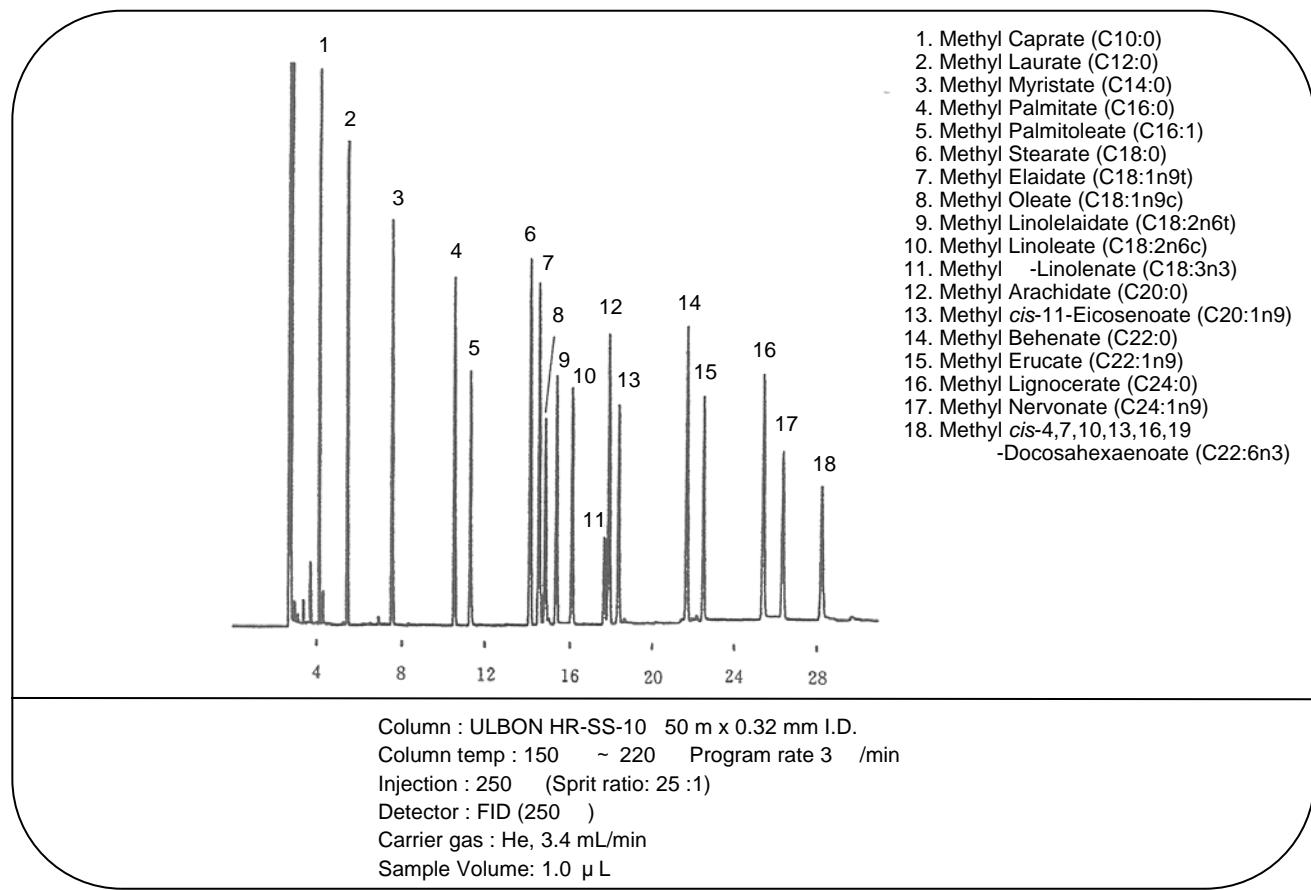

Sample Volume: 1.0 μ L

Fatty Acids and Esters

Fatty acid methyl esters standard

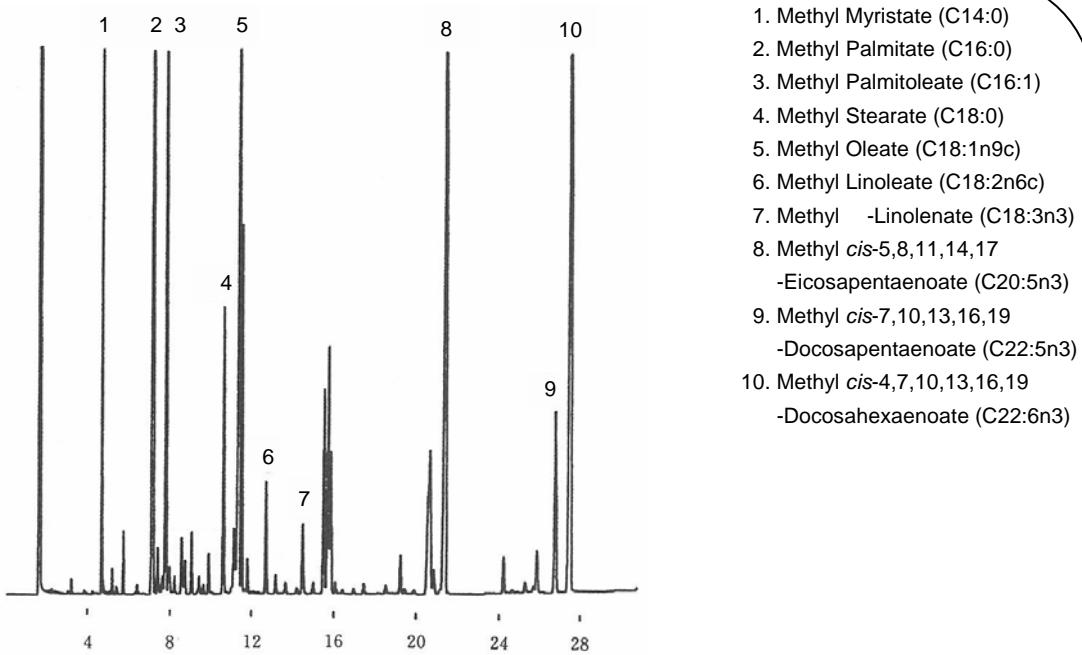

Fatty acid methyl esters standard

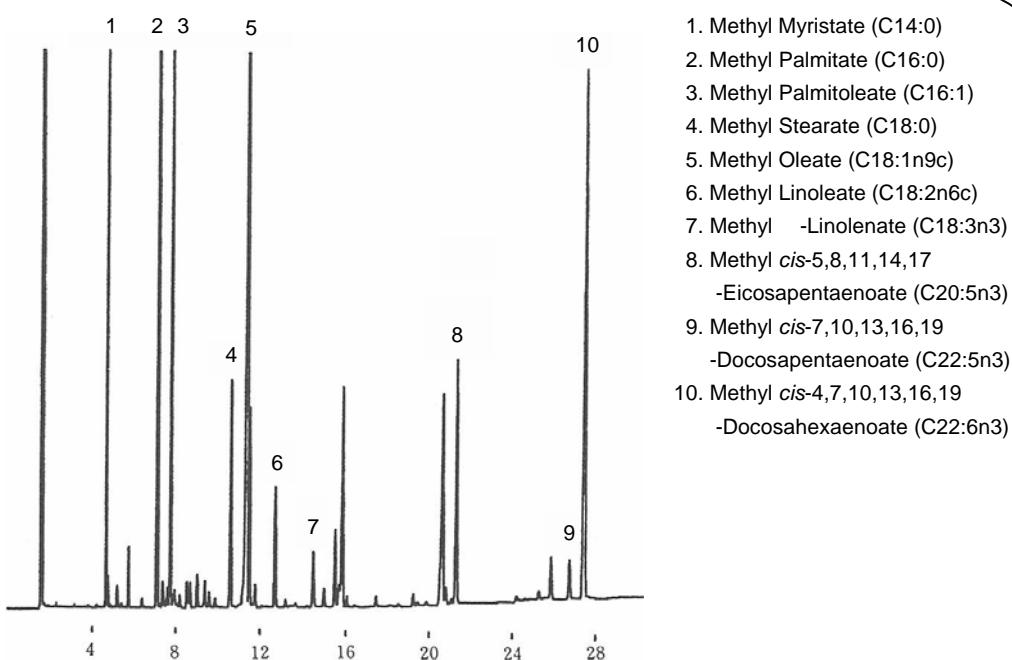

Fatty Acids and Esters

Young yellowtail oil

Column : ULBON HR-SS-10 25 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 2 /min
 Injection : 250 (Spirit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 1.5 mL/min
 Sample Volume: 1.0 μ L

Tuna oil

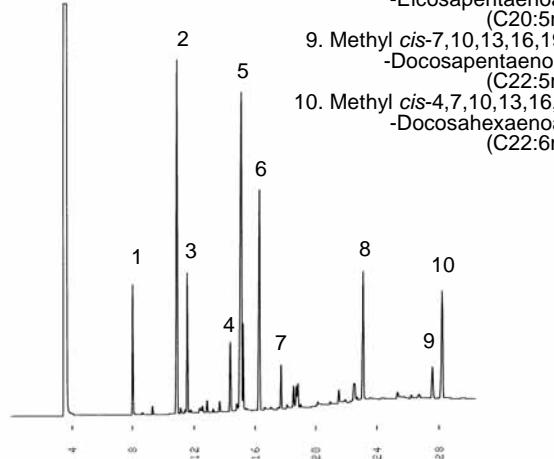

Column : ULBON HR-SS-10 25 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 2 /min
 Injection : 250 (Spirit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 1.5 mL/min
 Sample Volume: 1.0 μ L

Fatty Acids and Esters

Yellowtail oil

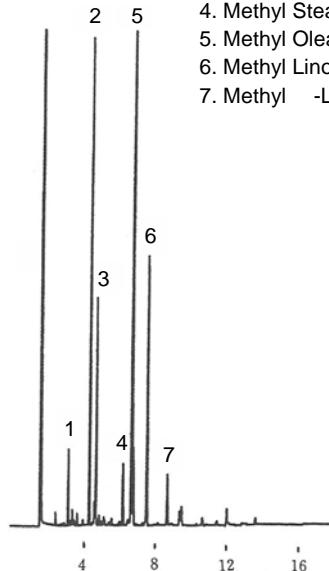

1. Methyl Myristate (C14:0)
2. Methyl Palmitate (C16:0)
3. Methyl Palmitoleate (C16:1)
4. Methyl Stearate (C18:0)
5. Methyl Oleate (C18:1n9c)
6. Methyl Linoleate (C18:2n6c)
7. Methyl -Linolenate (C18:3n3)
8. Methyl *cis*-5,8,11,14,17-Eicosapentaenoate (C20:5n3)
9. Methyl *cis*-7,10,13,16,19-Docosapentaenoate (C22:5n3)
10. Methyl *cis*-4,7,10,13,16,19-Docosahexaenoate (C22:6n3)

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

Carp oil

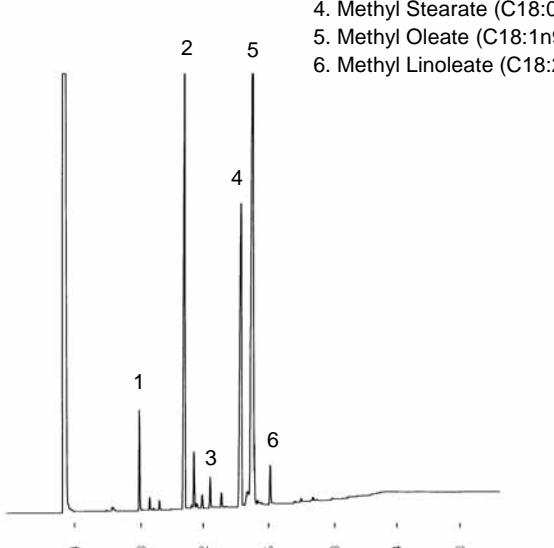

1. Methyl Myristate (C14:0)
2. Methyl Palmitate (C16:0)
3. Methyl Palmitoleate (C16:1)
4. Methyl Stearate (C18:0)
5. Methyl Oleate (C18:1n9c)
6. Methyl Linoleate (C18:2n6c)
7. Methyl -Linolenate (C18:3n3)

Column : ULBON HR-SS-10 25 m x 0.25 mm I.D.
 Column temp : 170 ~ 200 Program rate 2 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 1.5 mL/min
 Sample Volume: 1.0 μ L

Beef tallow

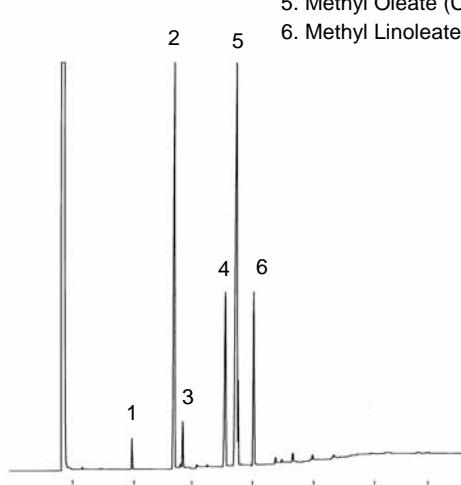

1. Methyl Myristate (C14:0)
2. Methyl Palmitate (C16:0)
3. Methyl Palmitoleate (C16:1)
4. Methyl Stearate (C18:0)
5. Methyl Oleate (C18:1n9c)
6. Methyl Linoleate (C18:2n6c)

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

Lard

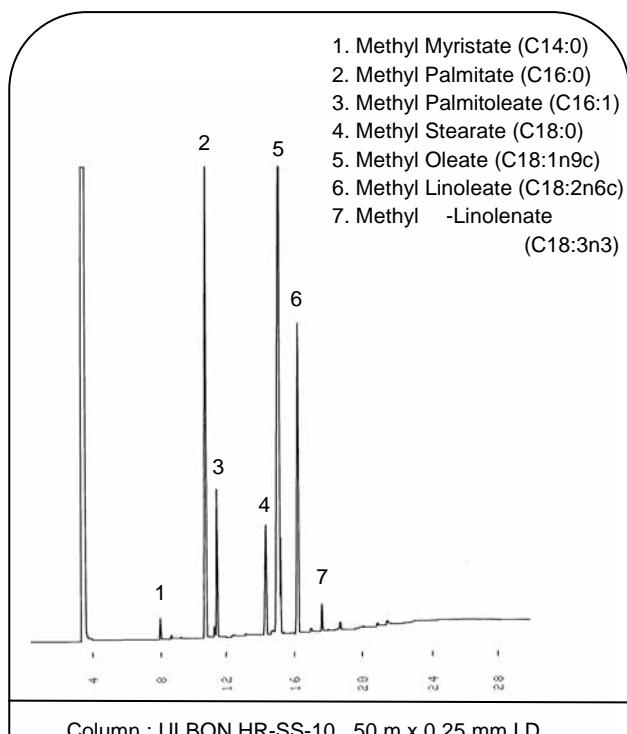

1. Methyl Myristate (C14:0)
2. Methyl Palmitate (C16:0)
3. Methyl Palmitoleate (C16:1)
4. Methyl Stearate (C18:0)
5. Methyl Oleate (C18:1n9c)
6. Methyl Linoleate (C18:2n6c)

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

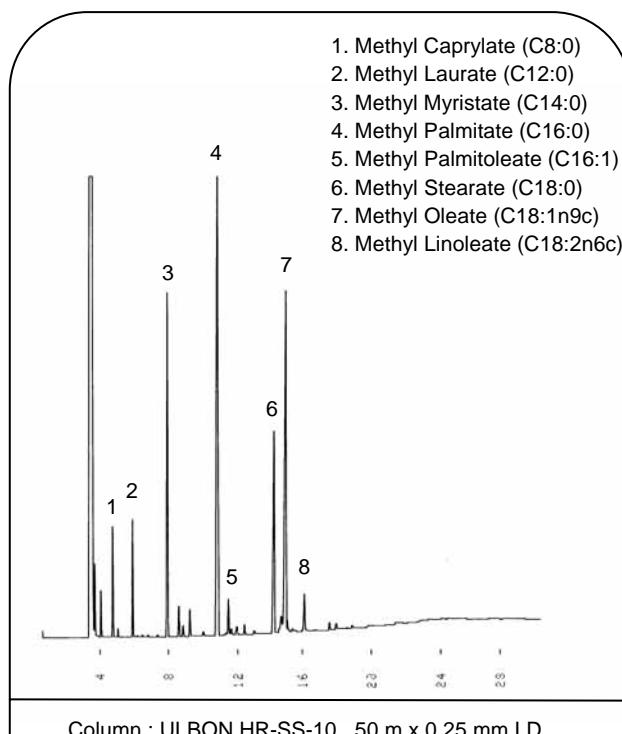

Fatty Acids and Esters

Chicken oil

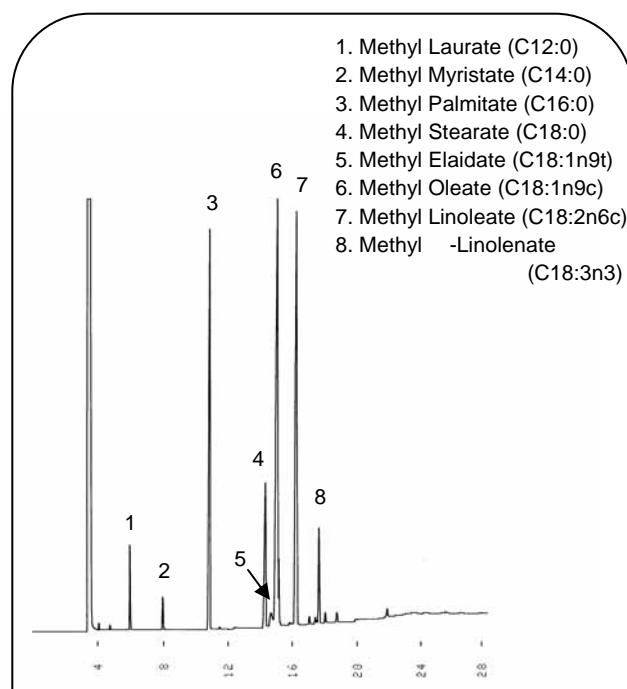

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

Butter

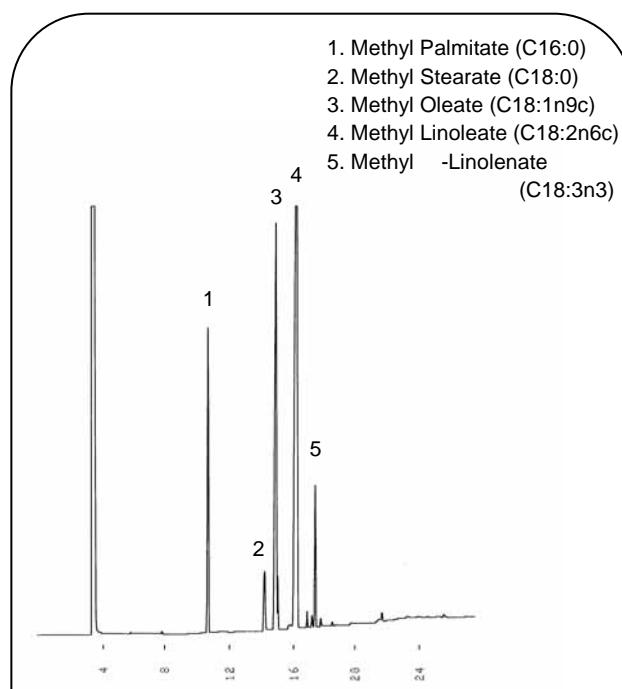

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

Margarine

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

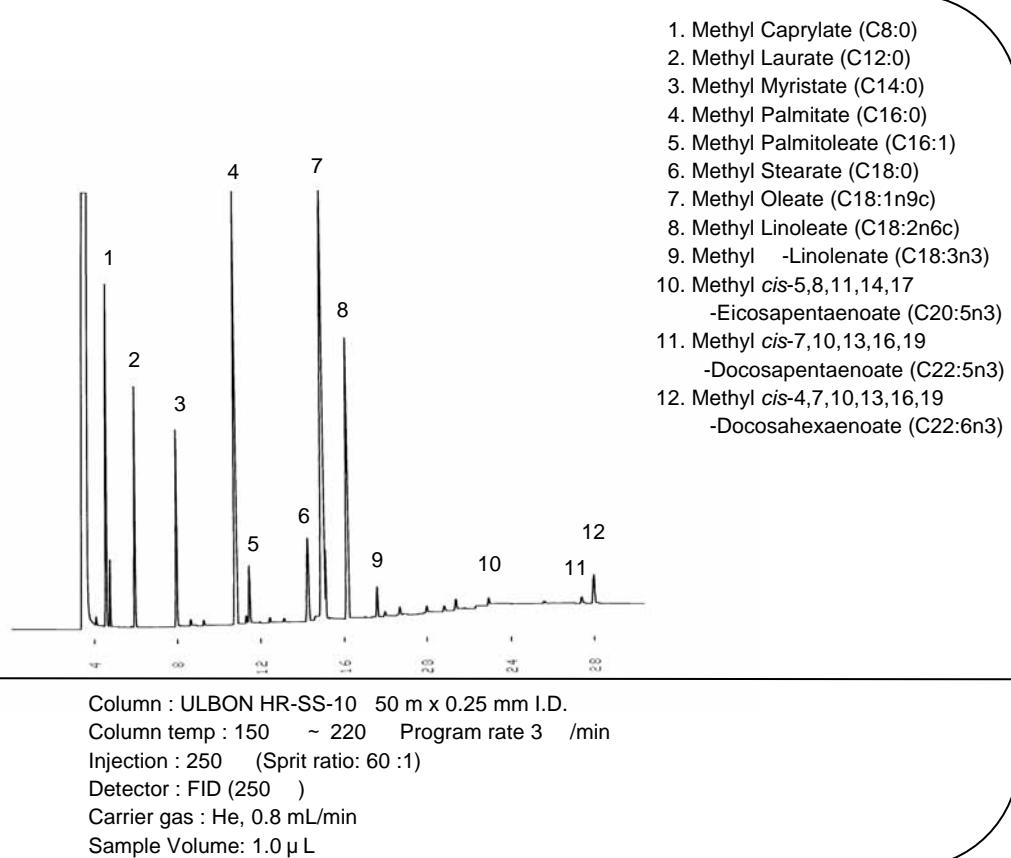

Soybean

Column : ULBON HR-SS-10 50 m x 0.25 mm I.D.
 Column temp : 150 ~ 220 Program rate 3 /min
 Injection : 250 (Sprit ratio: 60 :1)
 Detector : FID (250)
 Carrier gas : He, 0.8 mL/min
 Sample Volume: 1.0 μ L

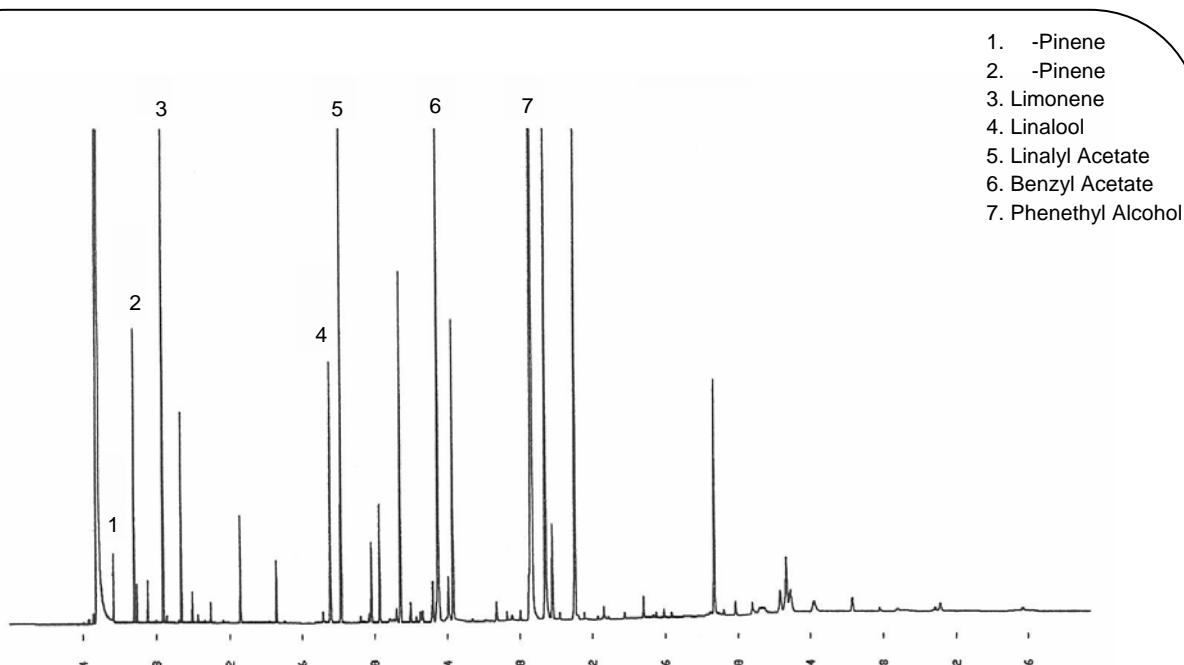

Fatty Acids and Esters

Breast milk

Perfume

Perfume (1)

Column : ULBON HR-Thermon-600T 50 m x 0.25 mm I.D.

Column temp : 70 ~ 230 Program rate 4 /min

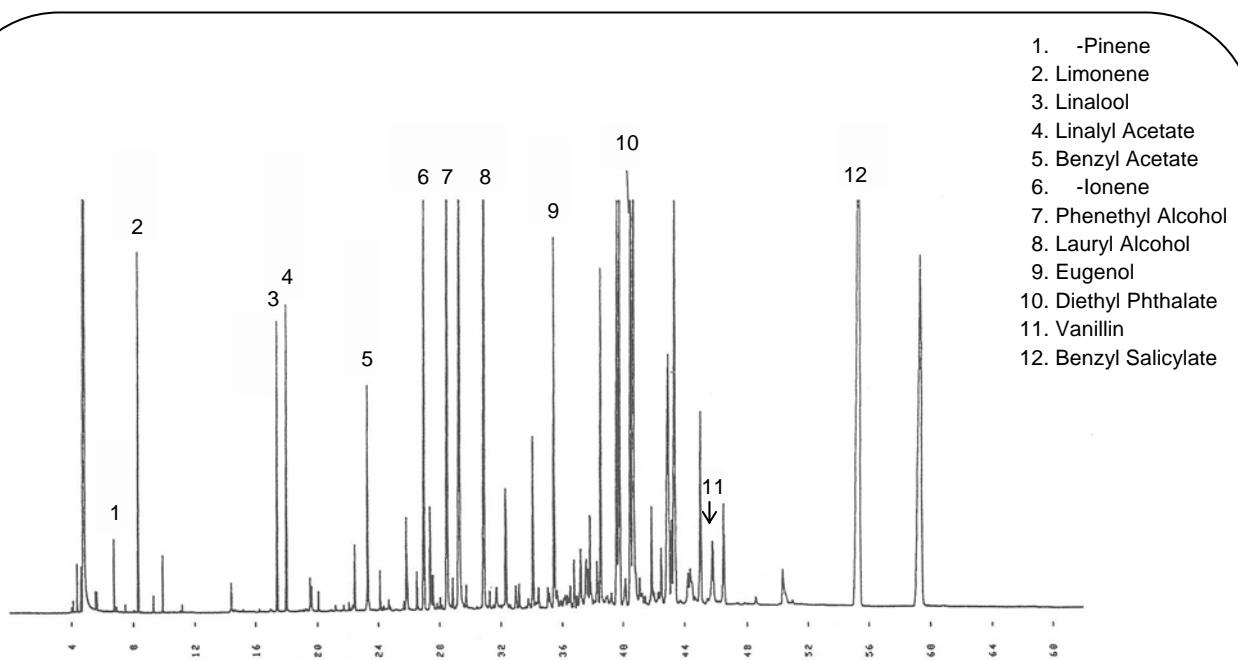

Injection : 250 (Spirit ratio: 80 :1)

Detector : FID (250)

Carrier gas : He, 1.1 mL/min

Sample Volume: 1.0 μ L

Perfume (2)

- 1. -Pinene
- 2. Limonene
- 3. Linalool
- 4. Linalyl Acetate
- 5. Benzyl Acetate
- 6. -Ionene
- 7. Phenethyl Alcohol
- 8. Lauryl Alcohol
- 9. Eugenol
- 10. Diethyl Phthalate
- 11. Vanillin
- 12. Benzyl Salicylate

Column : ULBON HR-Thermon-600T 50 m x 0.25 mm I.D.

Column temp : 70 ~ 230 Program rate 4 /min

Injection : 250 (Spirit ratio: 80 :1)

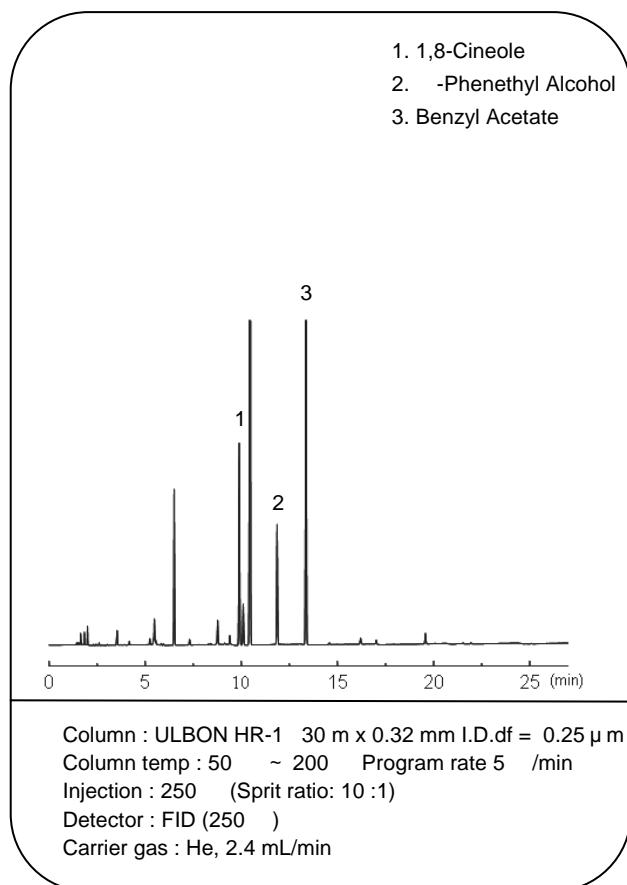

Detector : FID (250)

Carrier gas : He, 1.1 mL/min

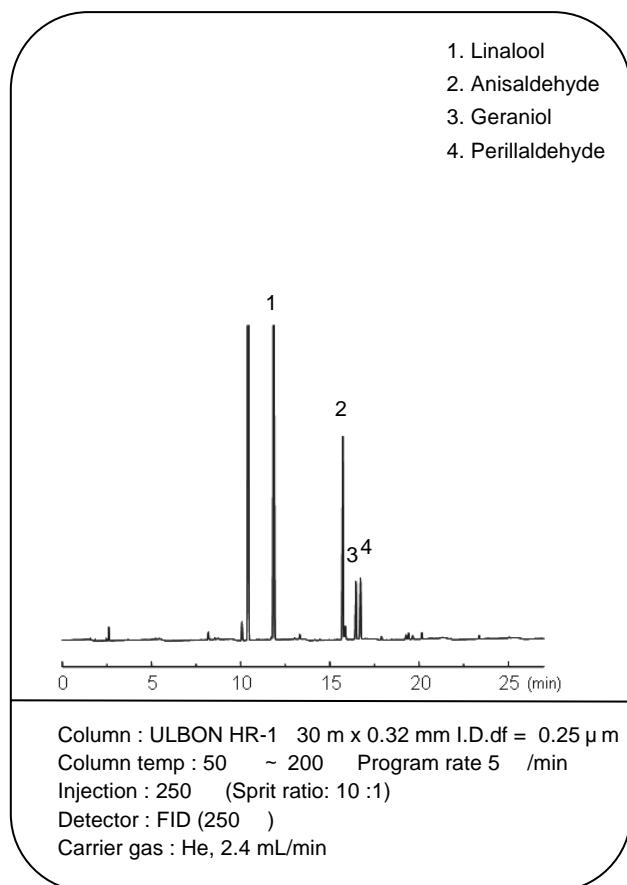

Sample Volume: 1.0 μ L

Flower fragrance using NeedlEx for organic solvent

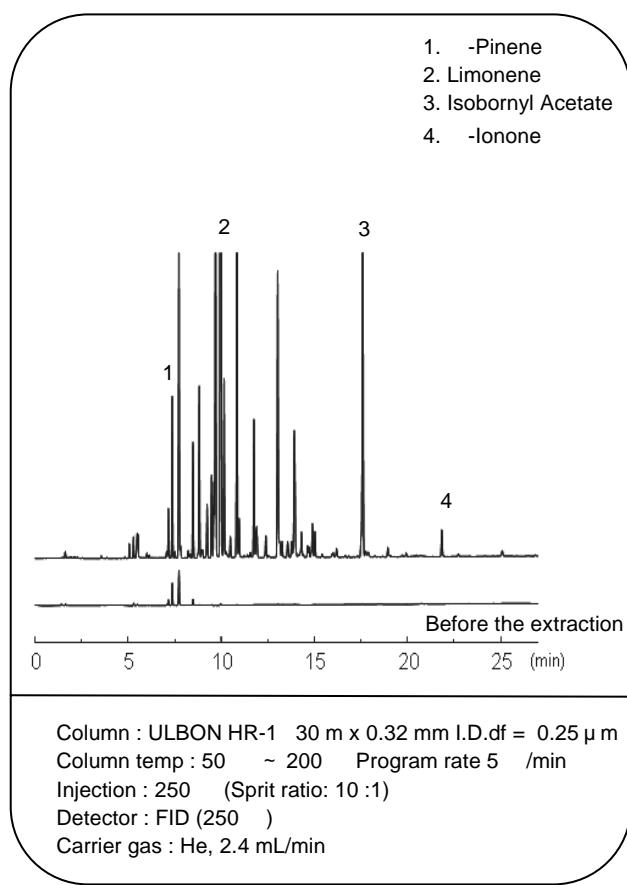

Narcissus

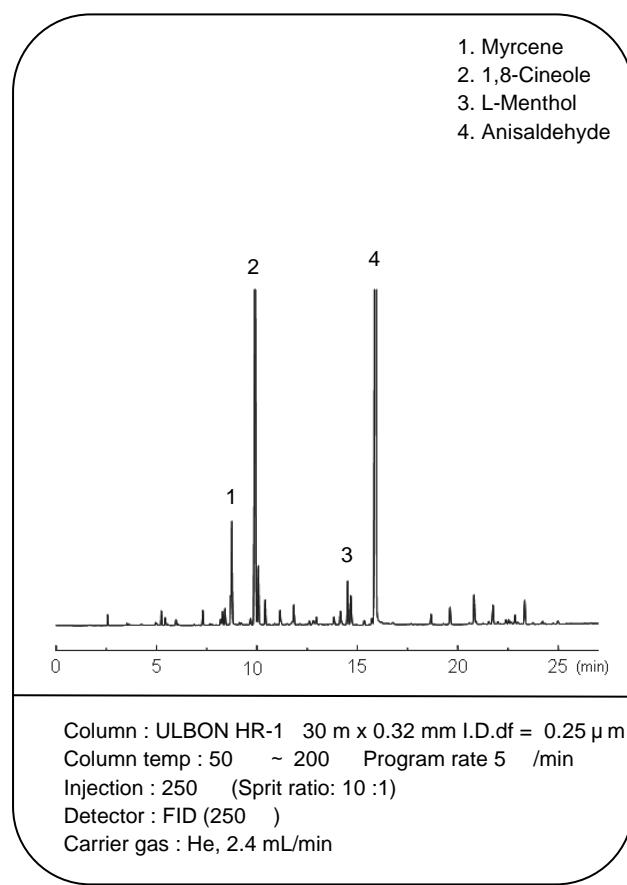

Fragrant daphne

Rosemary

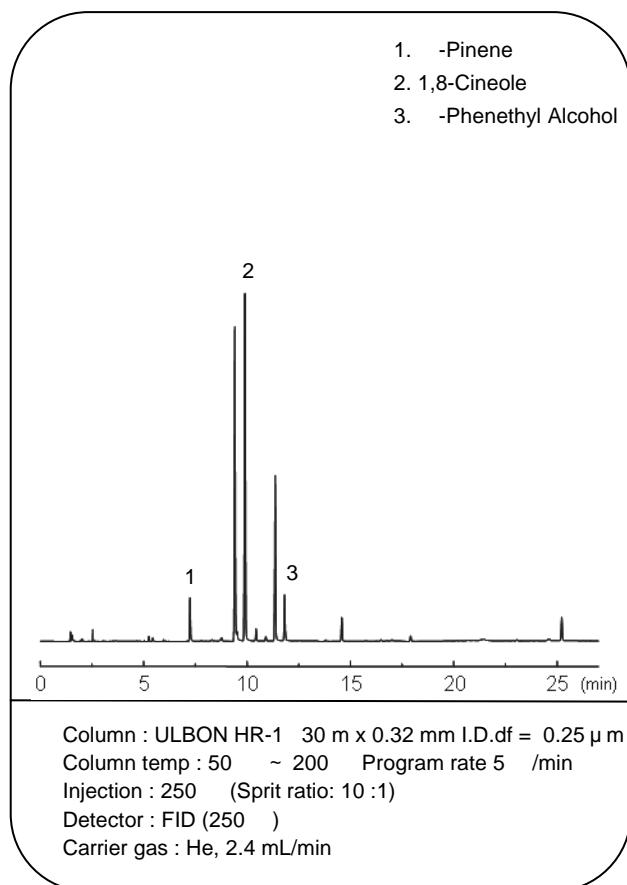

Peppermint

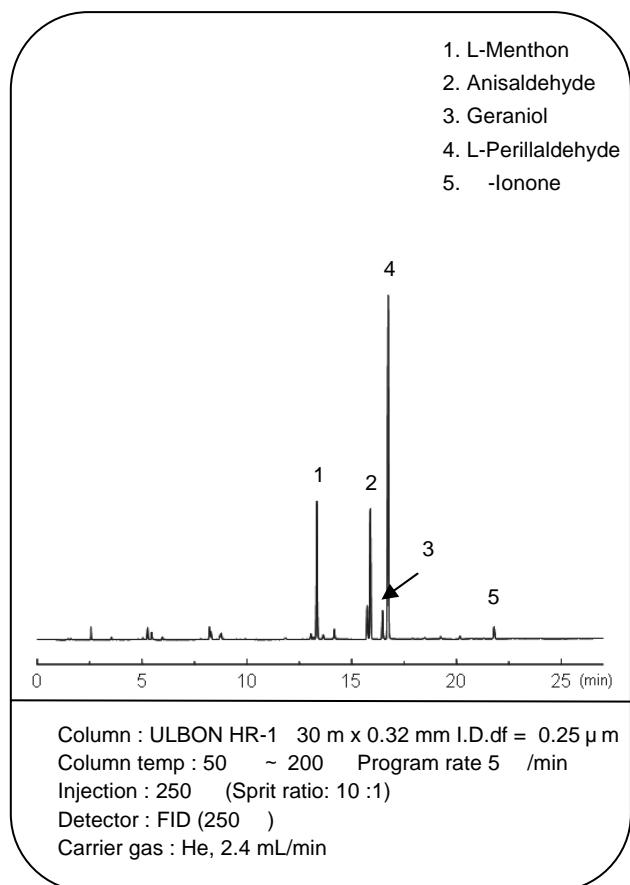

Flower fragrance using NeedlEx for organic solvent

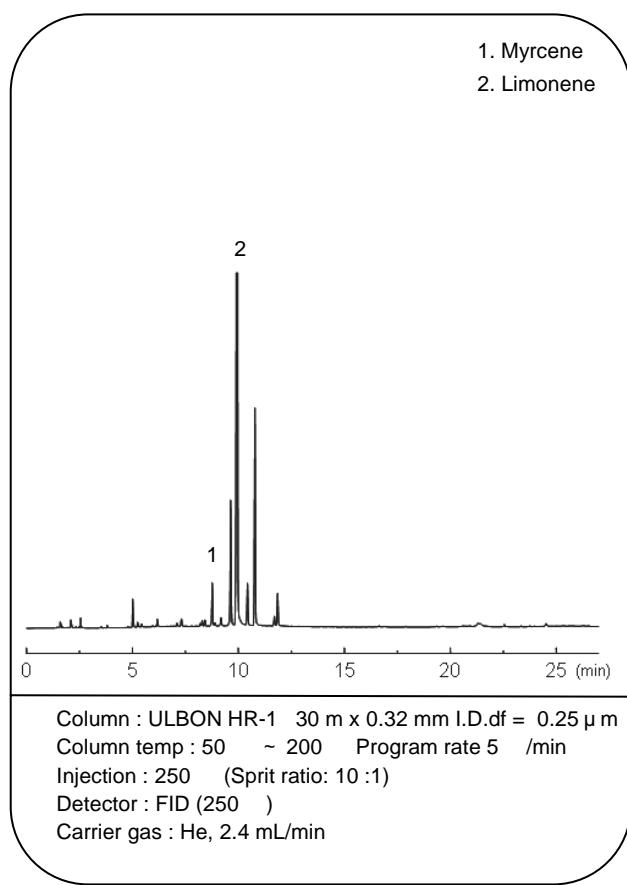

Angels trumpet

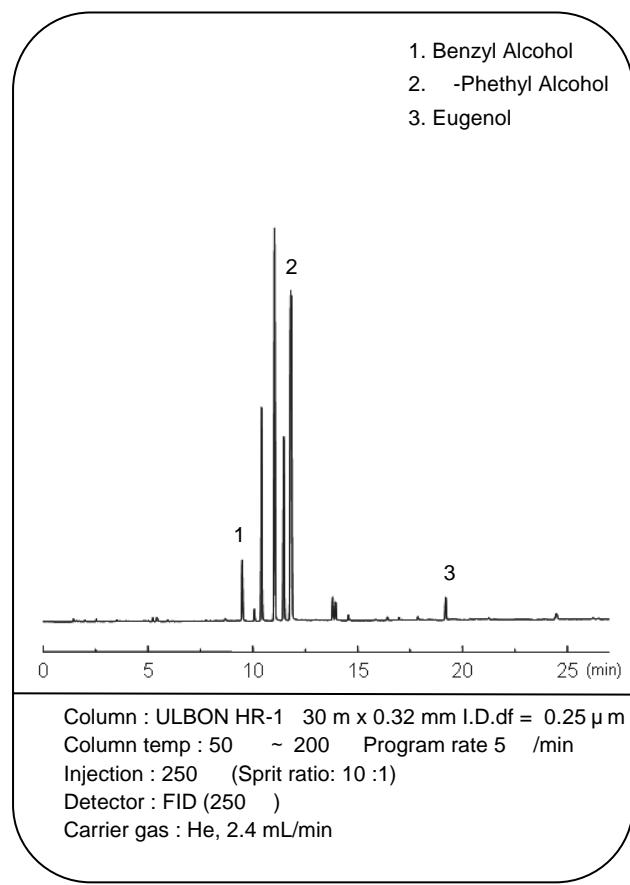

Lemon balm

Yuzu citron

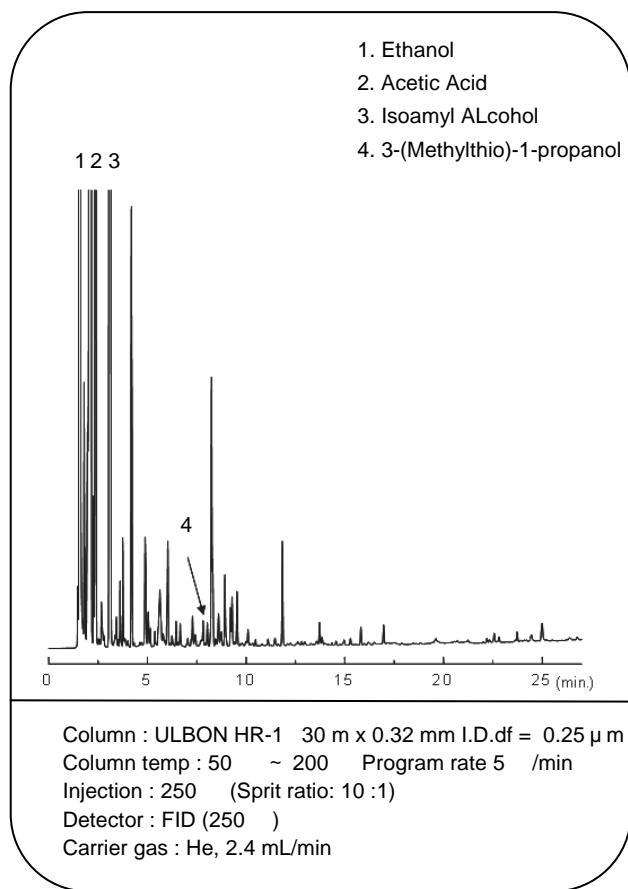

Holly tree

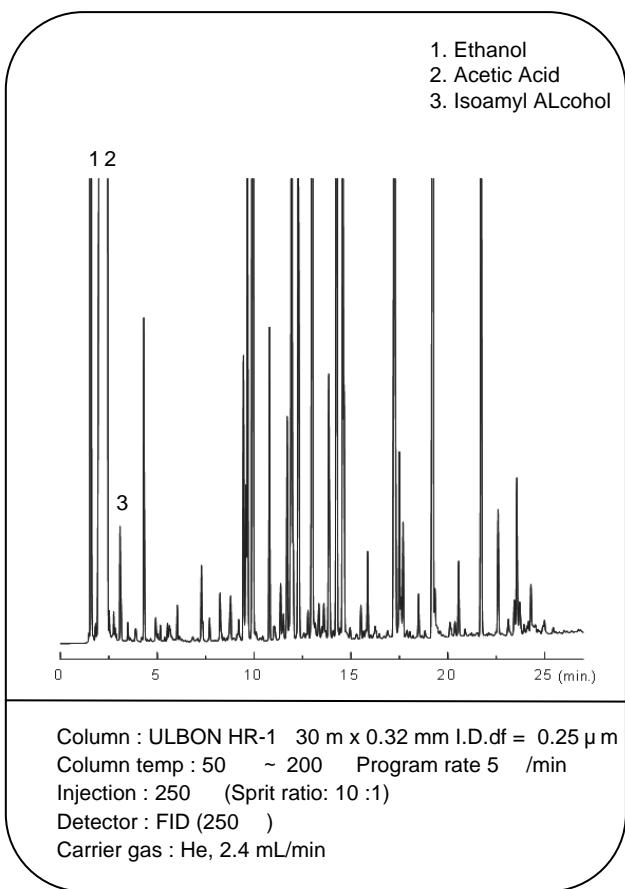

Food flavor using NeedlEx for organic solvent

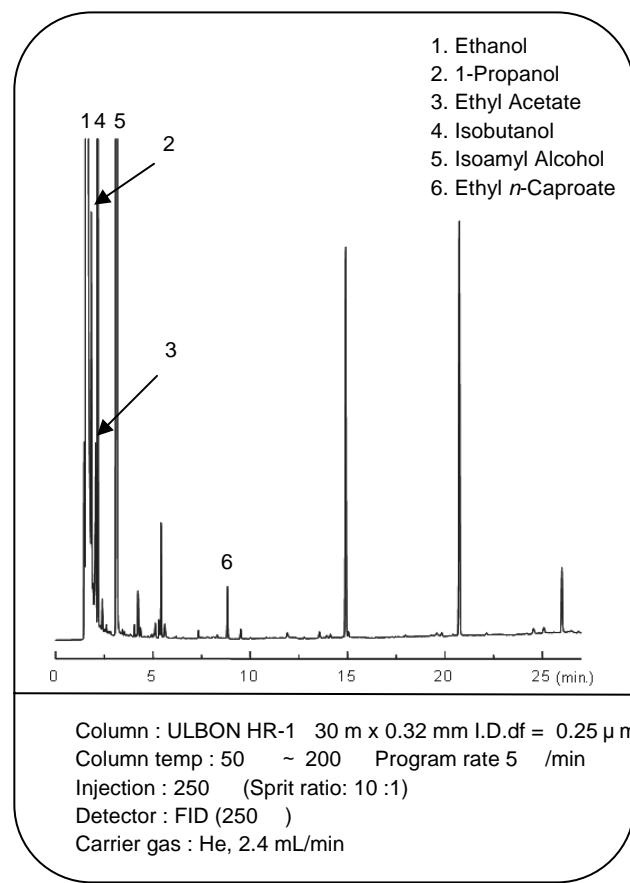

Soy sauce

Worcestershire sauce

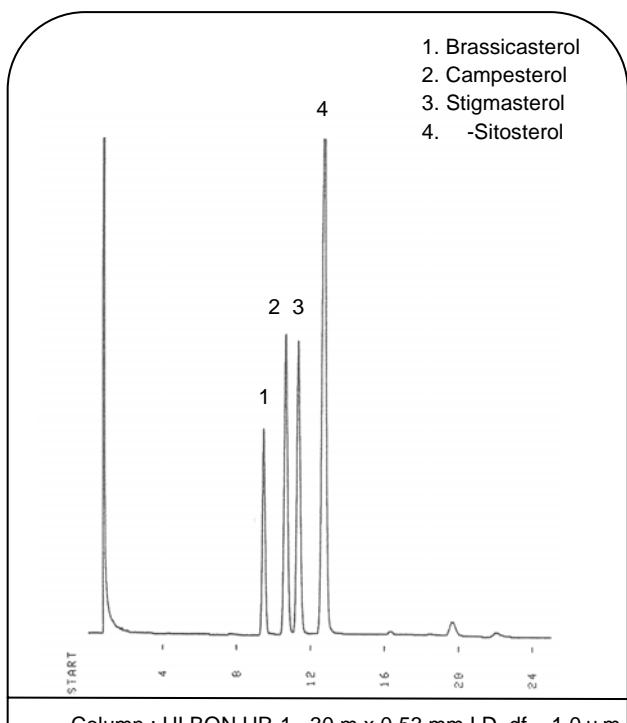

Brandy

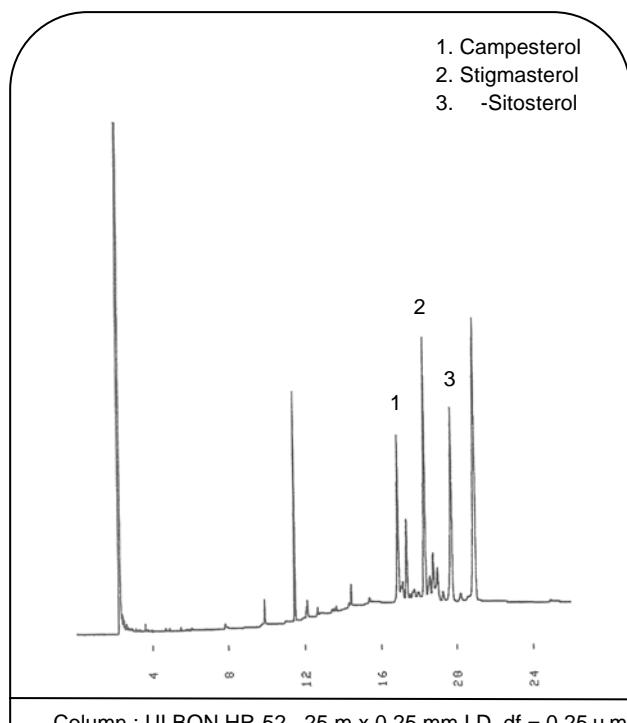

Steroids

Plant sterols

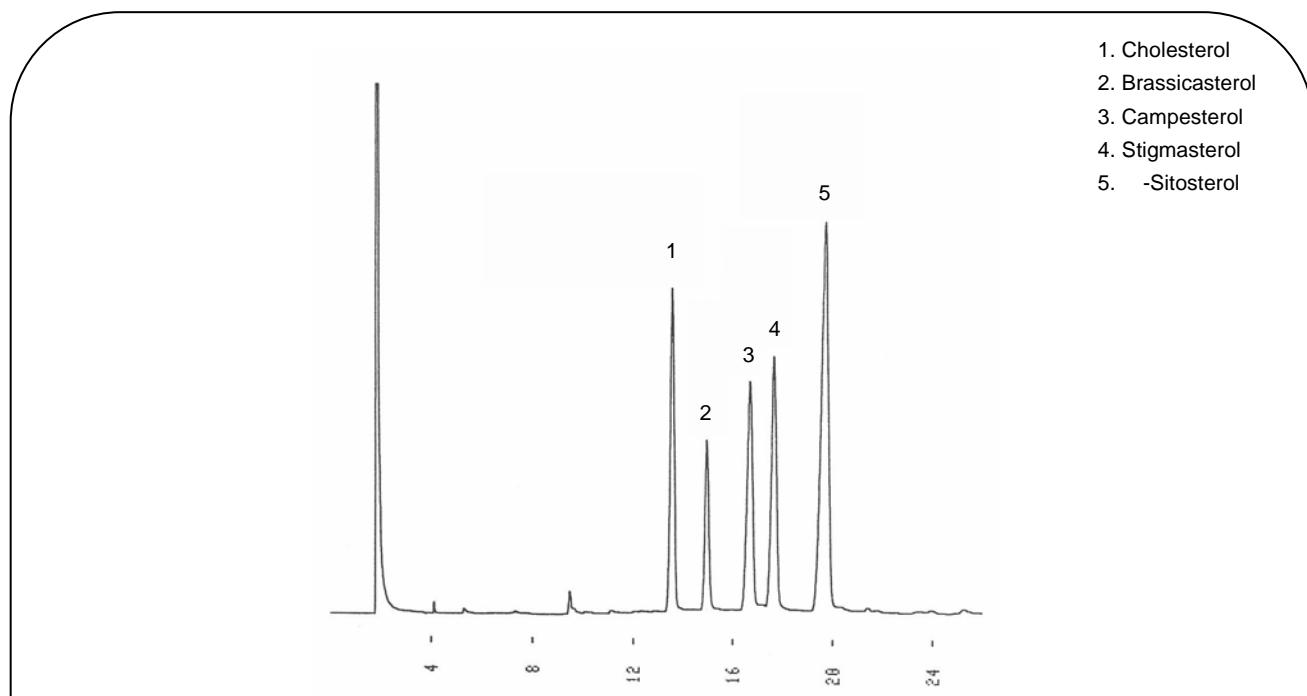

Column : ULBON HR-1 30 m x 0.53 mm I.D. df = 1.0 μ m
Column temp : 290
Injection : 320 (Direct)
Detector : FID (320)
Carrier gas : He, 7.1 mL/min
Sample Volume: 0.5 μ L

Plant sterols in rice bran oil

Column : ULBON HR-52 25 m x 0.25 mm I.D. df = 0.25 μ m
Column temp : 250 ~ 320 Program rate 5 /min
Injection : 330 (Spirit ratio: 61 :1)
Detector : FID (330)
Carrier gas : He, 0.5 mL/min
Sample Volume: 0.5 μ L

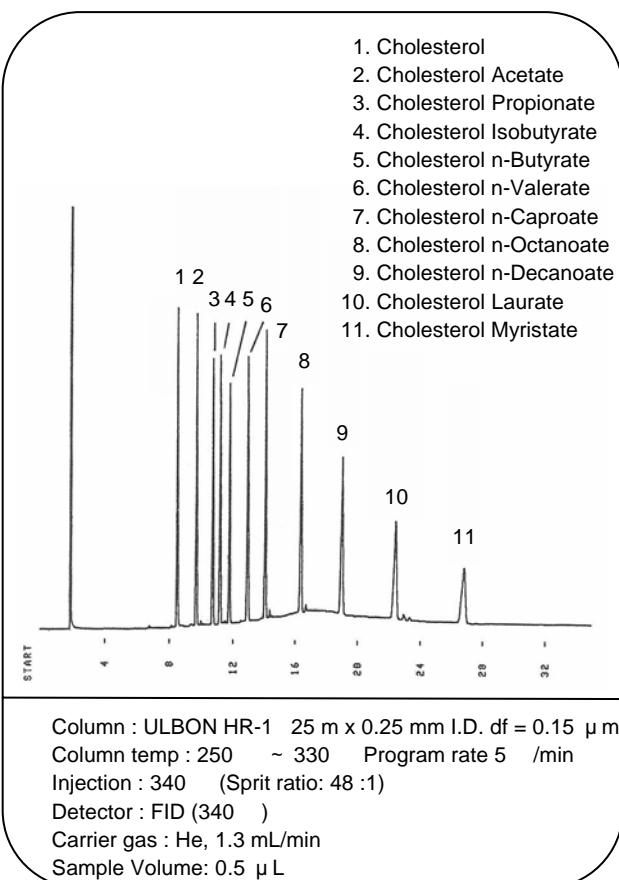

Cholesterol and Plant sterols

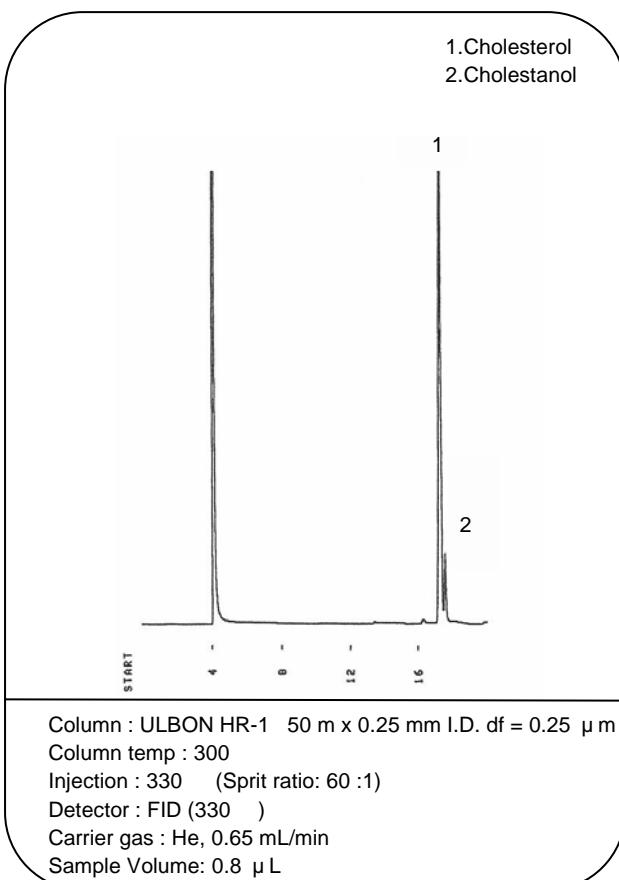

Column : ULBON HR-17 25 m x 0.25 mm I.D. df = 0.25 μ m
Column temp : 290
Injection : 310 (Spirit ratio: 20 :1)
Detector : FID (310)
Carrier gas : He, 1.5 mL/min
Sample Volume: 1.5 μ L

Steroids

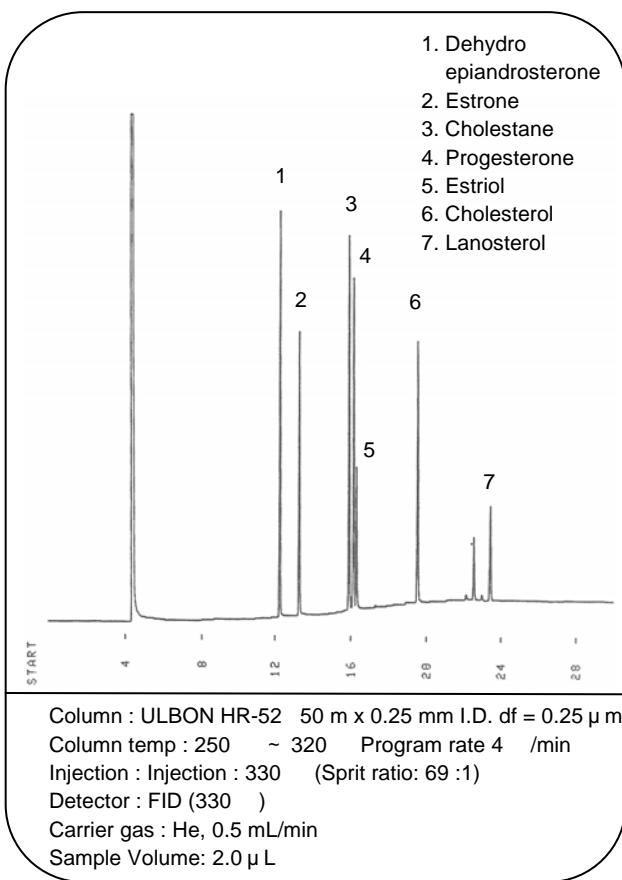

Cholesterol esters

Cholesterol & Cholestanol

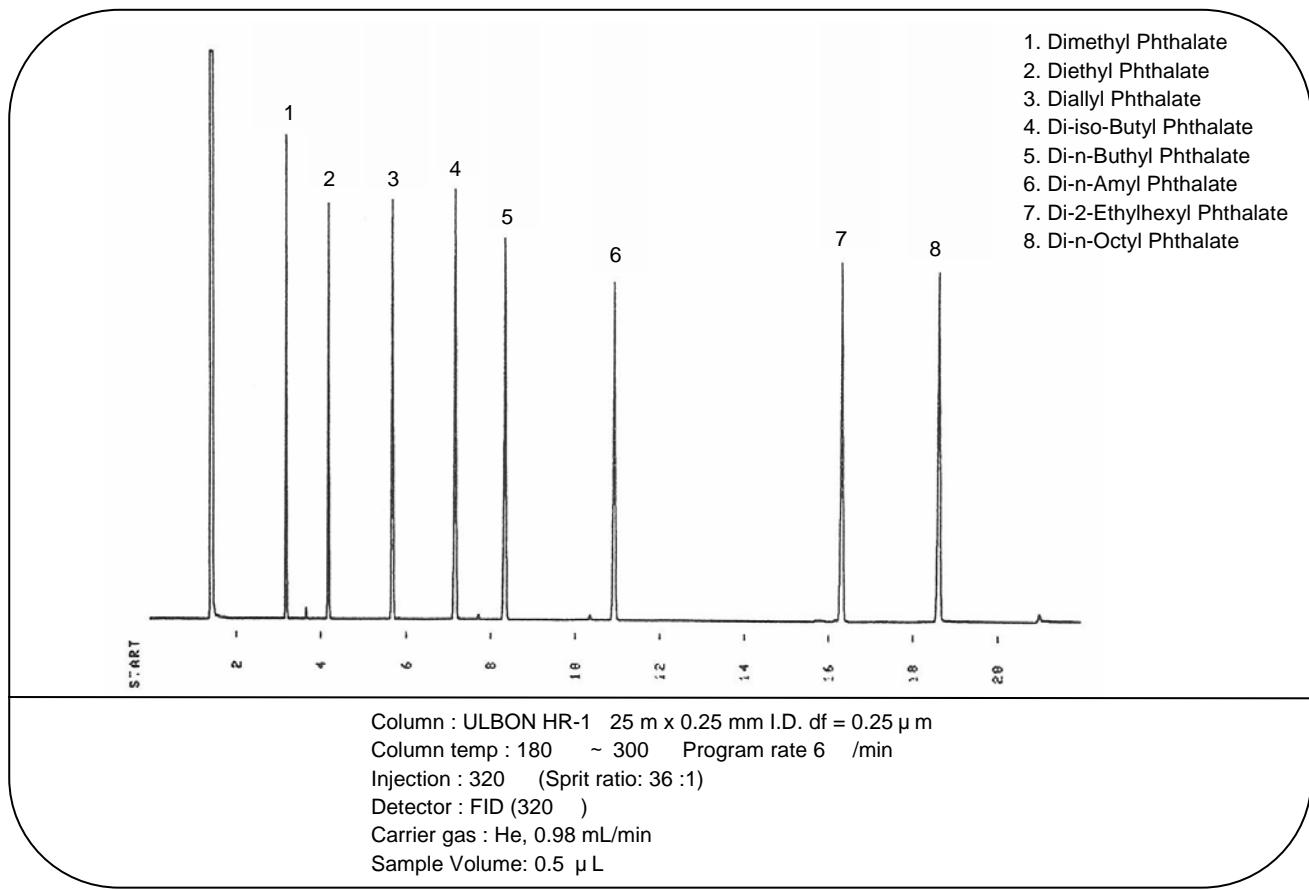

Sterols

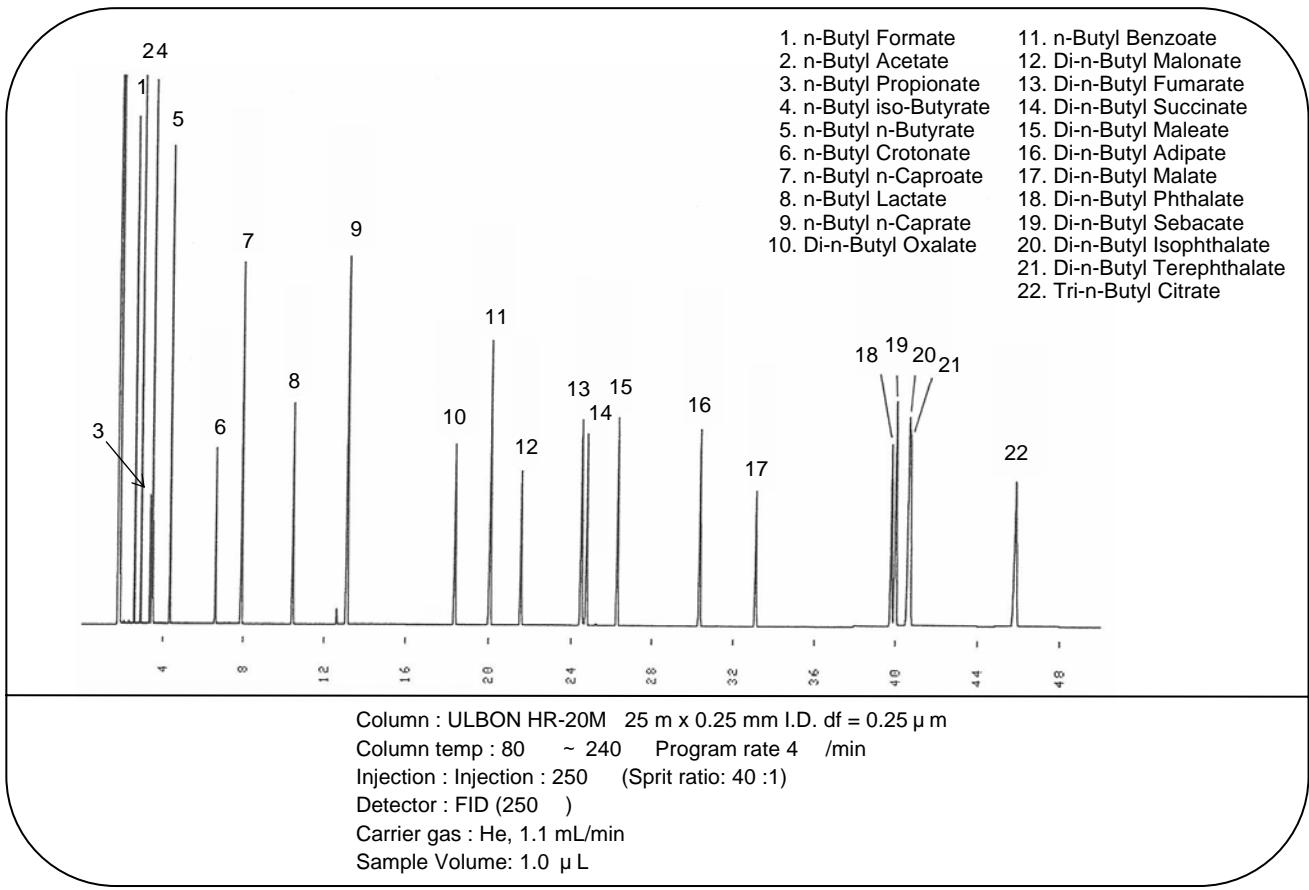

Environmental Pollutants

Phthalic acid esters

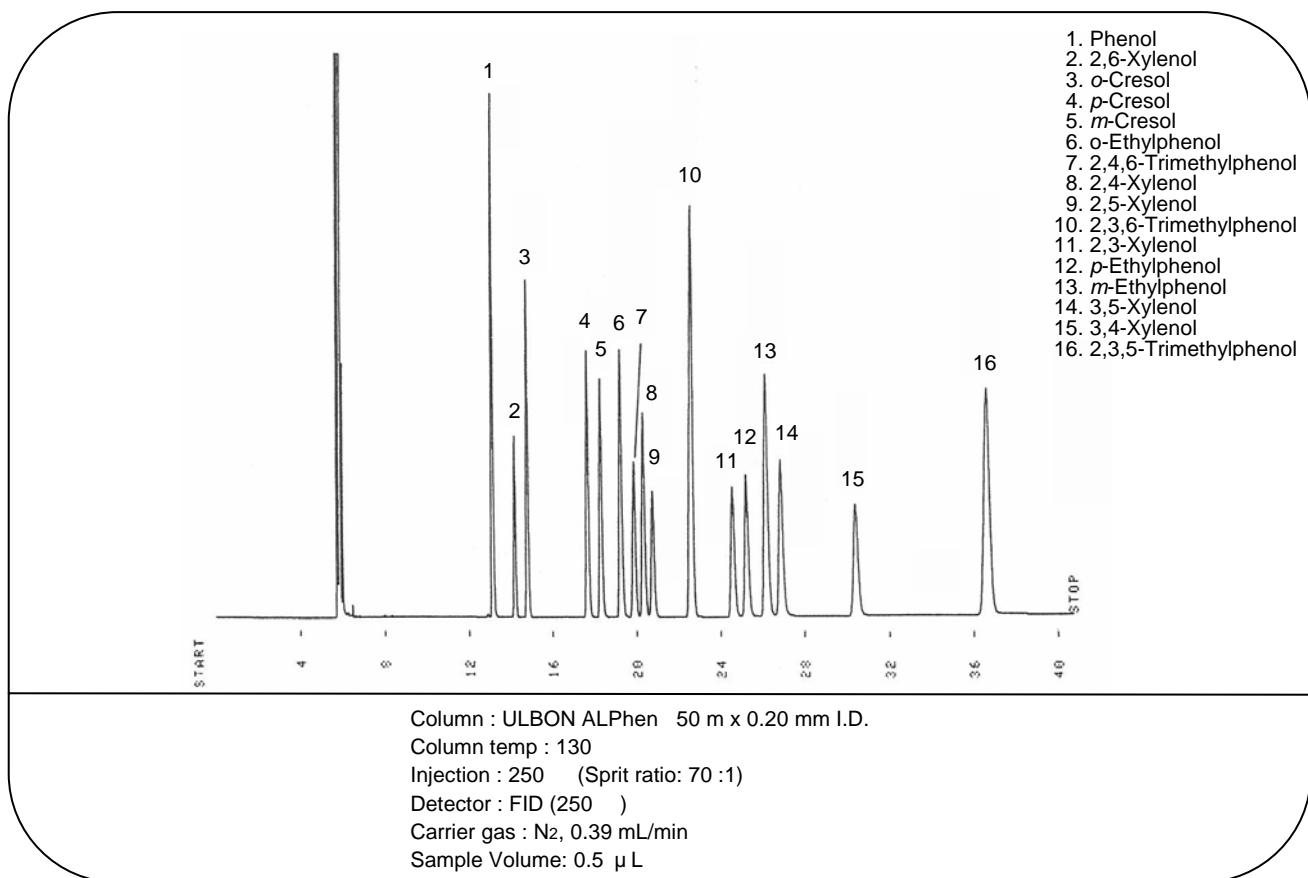

Organic acid butyl esters

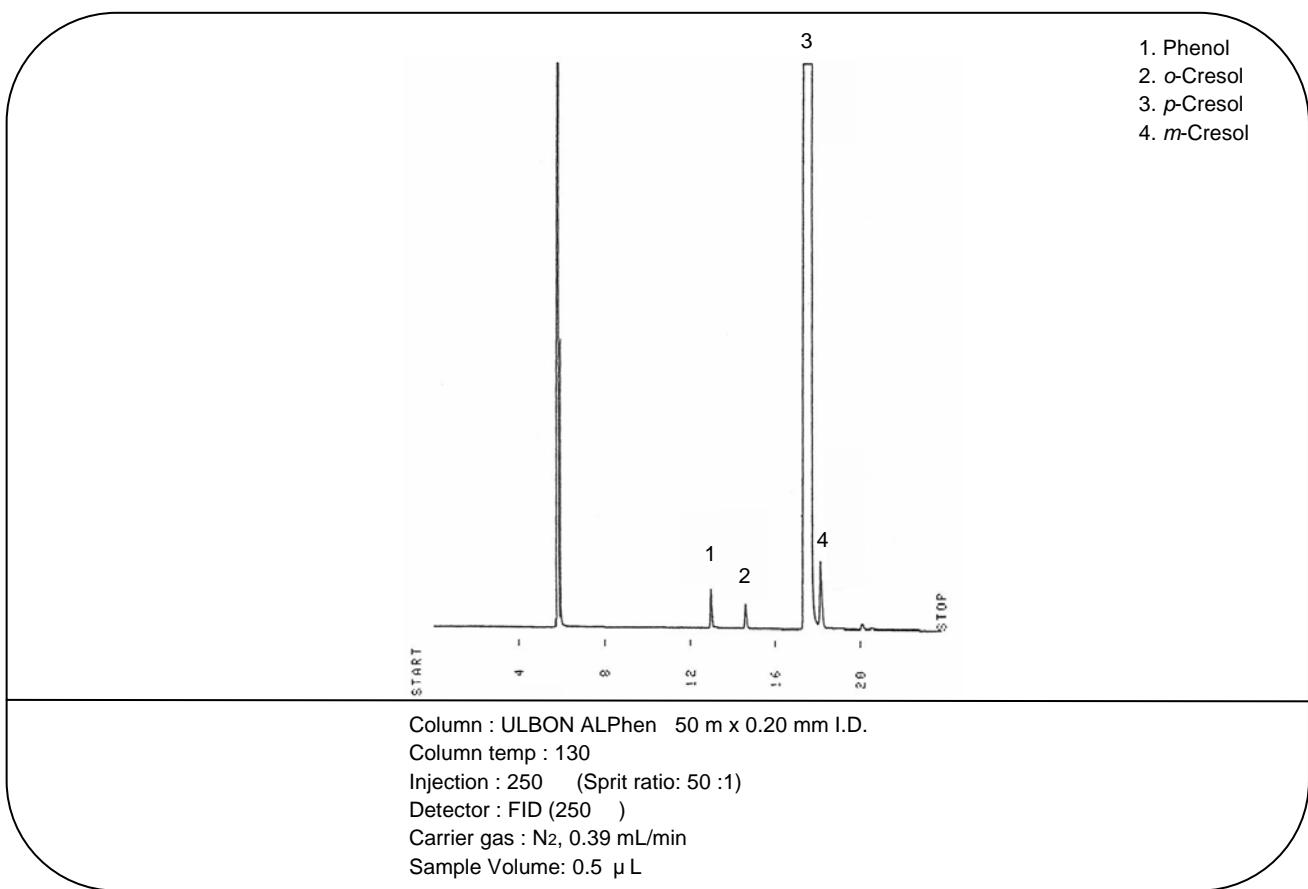

Environmental Pollutants

Alkylphenol isomers

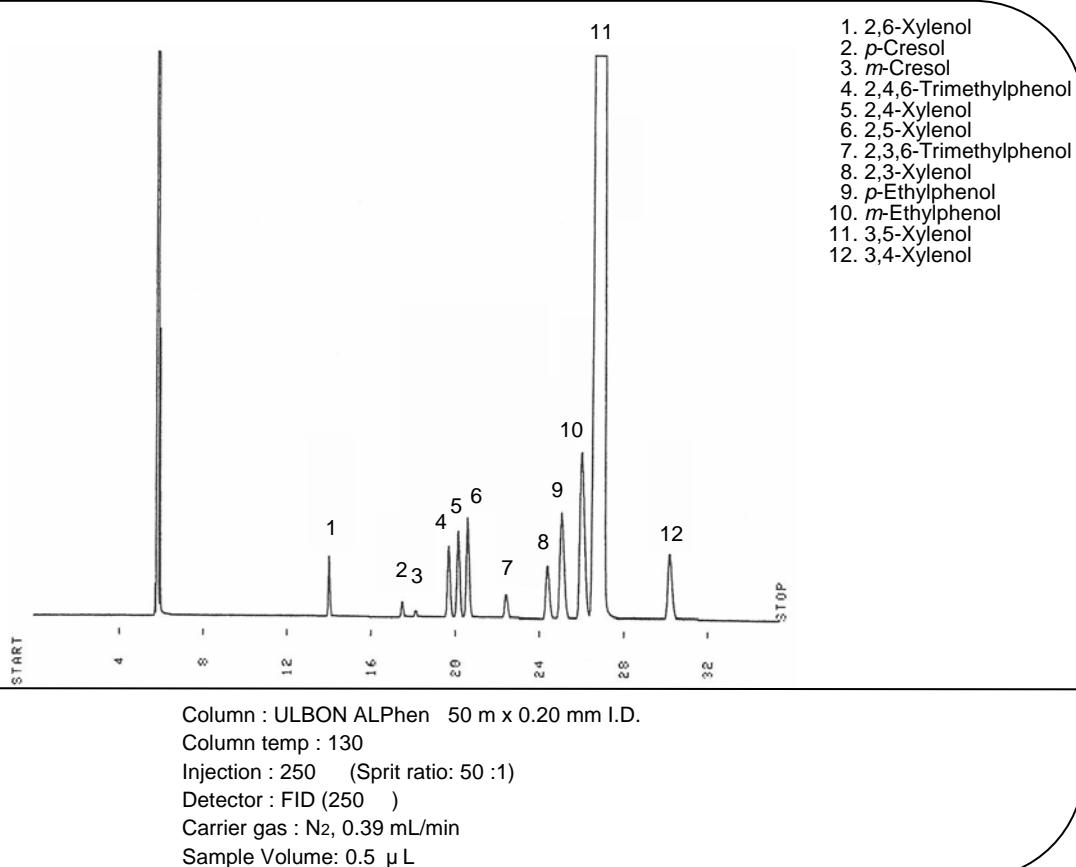

m-Cresol in p-Cresol (10% benzene solution)

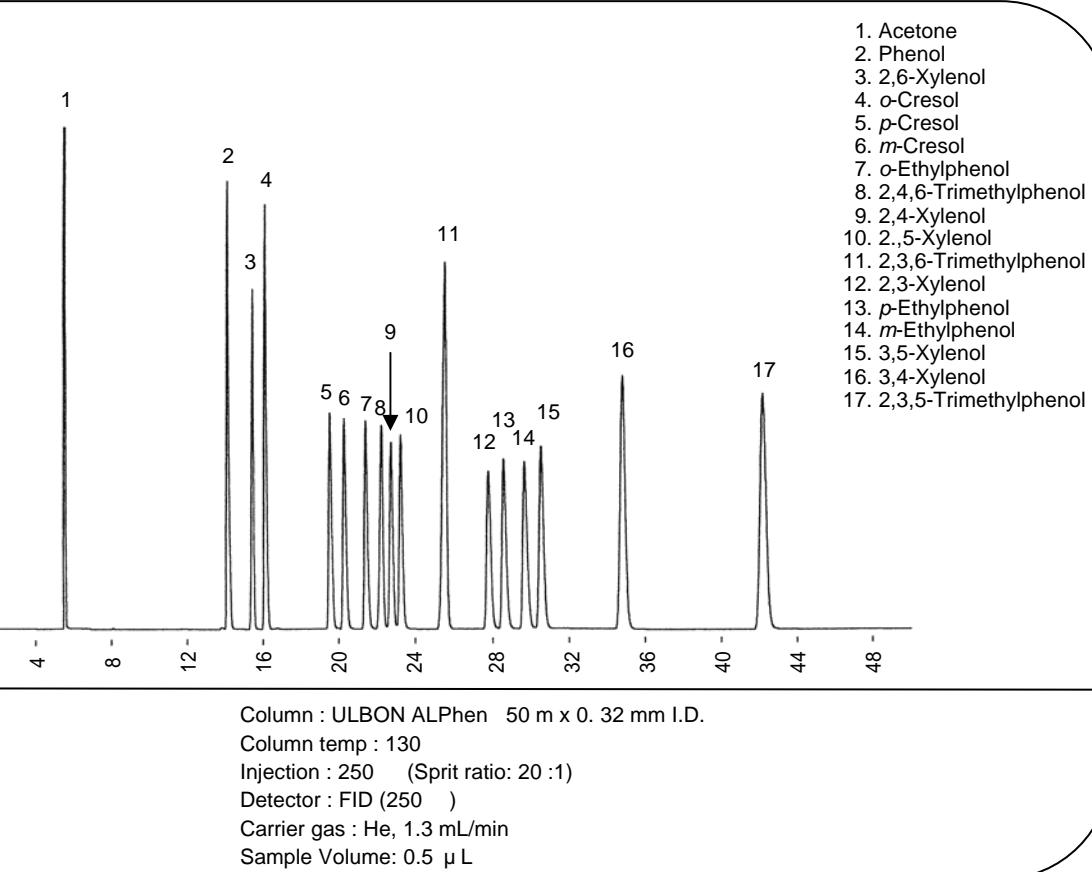

Environmental Pollutants

Impurities in 3,5-xylenol (10% benzene solution)

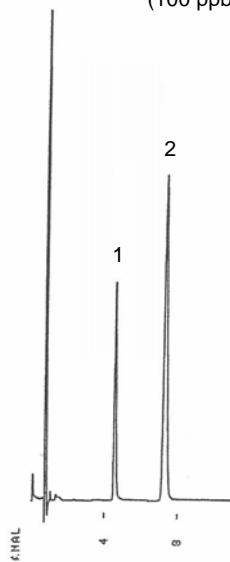

Alkylphenol mixture (0.1 ~ 0.3% Acetone solution)

Environmental Pollutants

Alkyl Mercury

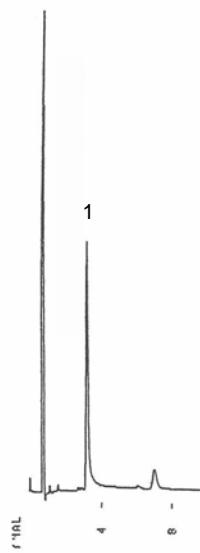

1. Methyl Mercuric Chloride
(100 ppb) (40 pg)
2. Ethyl Mercuric Chloride
(100 ppb) (40 pg)

Column : ULBON HR-Thermon-HG 15 m x 0.53 mm I.D.
Column temp : 150
Injection : 250 (Direct)
Detector : ECD (250)
Carrier gas : N₂, 4.5 mL/min
Sample Volume: 1.0 μ L

Tri-n-Butyltin Chloride

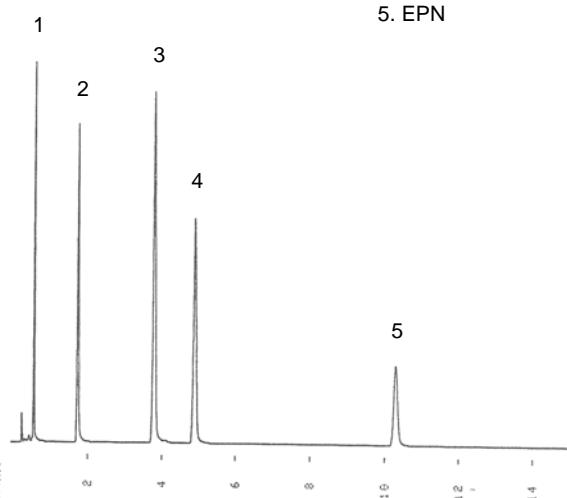

- 1.Tri-n-Butyltin Chloride
(100 ppb) (40 pg)

Column : ULBON HR-Thermon-HG 15 m x 0.53 mm I.D.
Column temp : 150
Injection : 250 (Direct)
Detector : ECD (250)
Carrier gas : N₂, 4.5 mL/min
Sample Volume: 1.0 μ L

Organic phosphorus pesticides

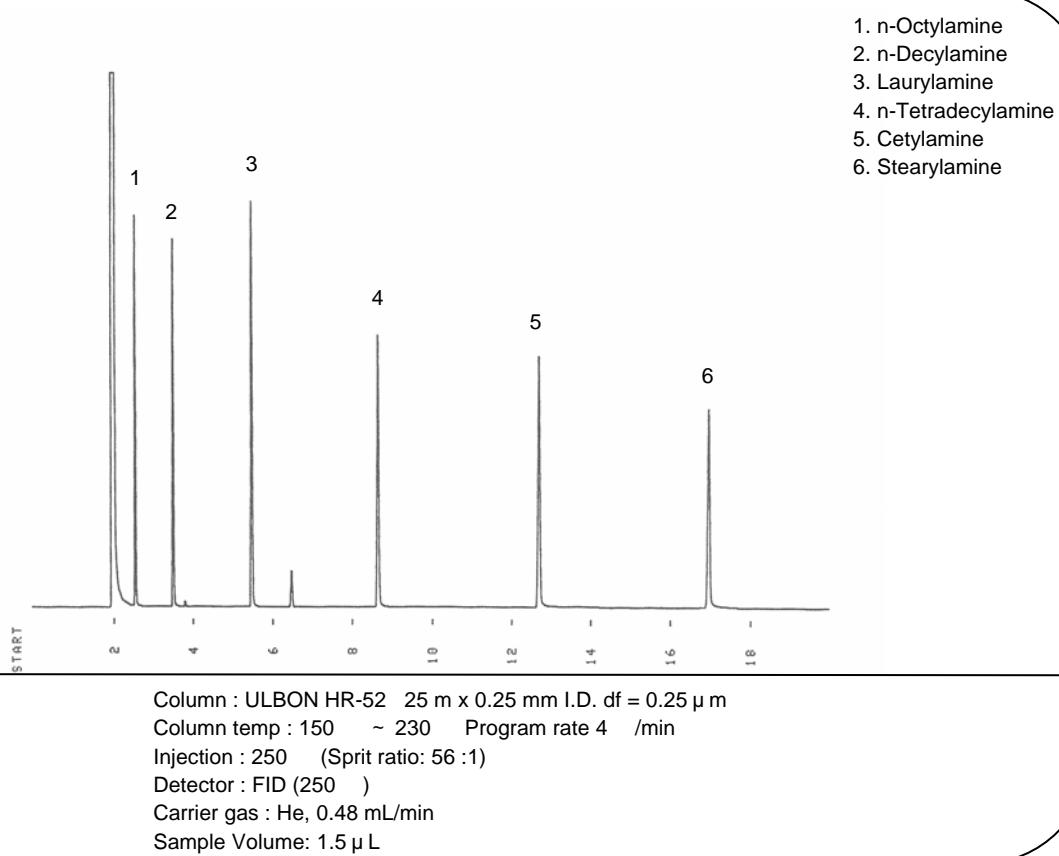

1. DDVP
2. Methyldimethone
3. Methylparathion
4. Ethylparathion
5. EPN

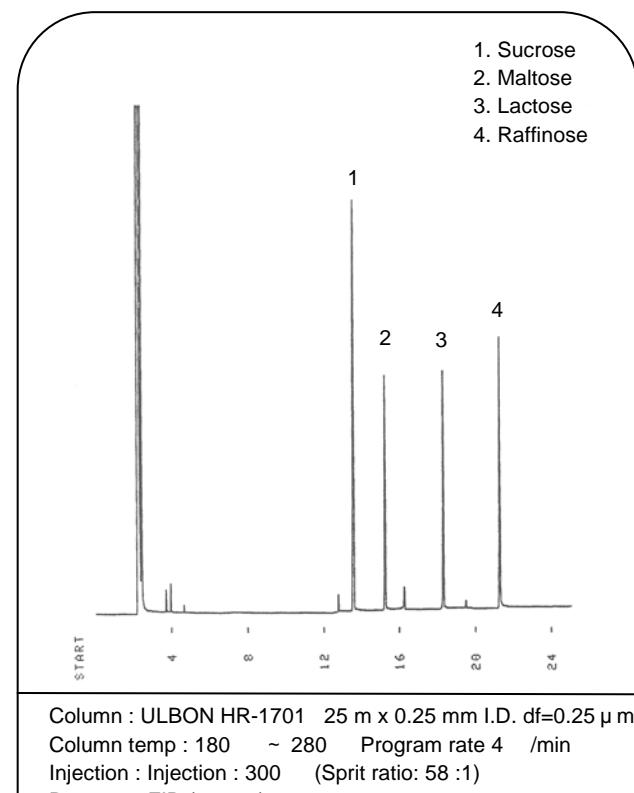

Column : ULBON HR-1 15 m x 0.53 mm I.D. df = 1.0 μ m
Column temp : 150 ~ 220 Program rate 6 /min
Injection : 250 (Direct)
Detector : FID (250)
Carrier gas : He, 10.7 mL/min
Sample Volume: 0.5 μ L

Others

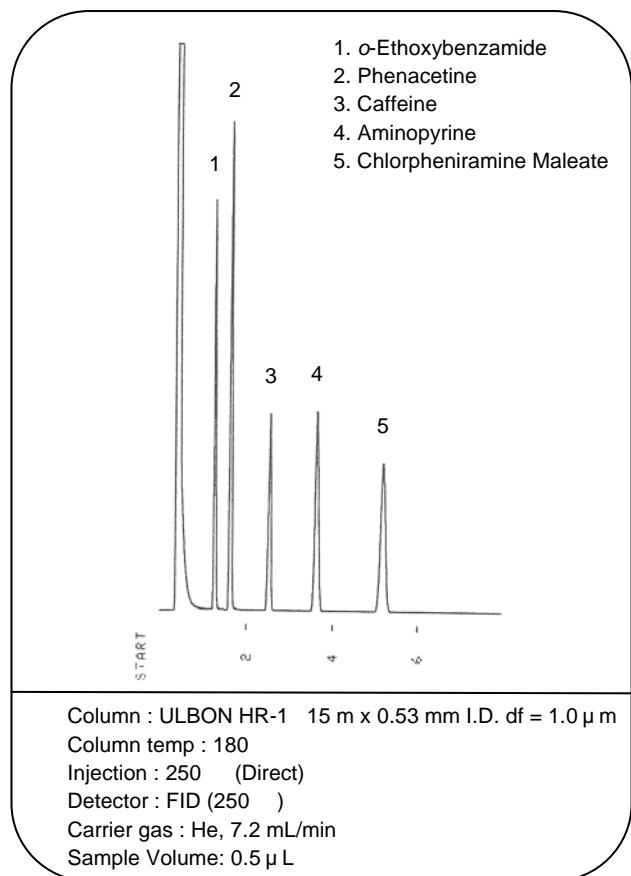

Aliphatic amines

Sugars (Acetate)

Medicines

| Methyl Mercuric Chloride | 40 |
| Methyl Montanate (C28:0) | 24 |
| Methyl Myristate (C14:0) | 25, 26, 27, 28, 29, 30 |
| Methyl Myristoleate (C14:1) | 26 |
| Methyl Nervonate (C24:1n9) | 25, 26 |
| Methyl Oleate (C18:1n9c) | 25, 26, 27, 28, 29, 30 |
| Methyl Palmitate (C16:0) | 25, 26, 27, 28, 29, 30 |
| Methyl Palmitoleate (C16:1) | 25, 26, 27, 28, 29, 30 |
| Methyl Pentadecanoate (C15:0) | 26 |
| Methyl <i>cis</i> -10-Pentadecanoate (C15:1) | 26 |
| Methyl Stearate (C18:0) | 25, 26, 27, 28, 29, 30 |
| Methyl Tricosanoate (C23:0) | 26 |
| Methyl Tridecanoate (C13:0) | 26 |
| Methyl Undecanoate (C11:0) | 26 |
| 2-Methylcyclohexanol | 18, 20, 21 |
| 3-Methylcyclohexanol(<i>cis, trans</i>) | 19 |
| <i>cis</i> -4-Methylcyclohexanol | 20 |

Application Index

| M | |
|------------------------------------|----------------|
| <i>trans</i> -4-Methylcyclohexanol | 20 |
| 2-Methylcyclohexanone | 19, 20, 21 |
| 3-Methylcyclohexanone | 20 |
| 4-Methylcyclohexanone | 18, 19, 20, 21 |
| Methyldimethone | 40 |
| 1-Methylnaphthalene | 15 |
| 2-Methylnaphthalene | 15 |
| Methylparathion | 40 |
| 3-(Methylthio)-1-propanol | 34 |
| Myrcene | 32, 33 |
| N | |
| Naphthalene | 12, 13, 14 |
| n-Nonane | 16 |
| O | |
| n-Octadecanol | 22 |
| n-Octane | 16 |
| iso-Octane | 12, 13 |
| n-Octylamine | 41 |
| P | |
| n-Pentacosane | 10, 11 |
| n-Pentane | 12, 13 |
| 3-Pentanol | 22 |
| L-Perillaldehyde | 33 |
| Perillaldehyde | 32 |
| Perylene | 14 |
| Phenacetine | 41 |
| Phenanthrene | 14 |
| Phenethyl Alcohol | 31 |
| -Phenethyl Alcohol | 32, 33 |
| Phenol | 38, 39 |
| -Phethyl Alcohol | 33 |
| -Pinene | 31, 32, 33 |
| -Pinene | 31 |
| Progesterone | 36 |
| 1-Propanol | 18, 19, 22, 34 |
| 2-Propanol | 19, 20, 21 |

Application Index

| | |
|----------------------------|------------------------------------|
| P | |
| Propionic Acid | 24 |
| n-Propyl Acetate | 18, 20 |
| n-Propylbenzene | 12, 13, 14, 16, 17 |
| iso-Propylbenzene | 12, 13, 14, 17 |
| 2-n-Propyltoluene | 16 |
| 3-n-Propyltoluene | 16 |
| 4-n-Propyltoluene | 16 |
| Pyrene | 14 |
| R | |
| Raffinose | 41 |
| S | |
| -Sitosterol | 35 |
| Stearylamine | 41 |
| Stigmasterol | 35 |
| Styrene | 14, 16, 18, 19, 20, 21 |
| Sucrose | 41 |
| T | |
| <i>m</i> -Terphenyl | 14 |
| <i>o</i> -Terphenyl | 14 |
| <i>p</i> -Terphenyl | 14 |
| 1,1,2,2-Tetrachloroethane | 19, 20, 21 |
| Tetrachloroethylene | 18, 19, 20, 21 |
| n-Tetradecylamine | 41 |
| Tetrahydrofuran | 18, 19, 21 |
| 1,2,3,4-Tetramethylbenzene | 16 |
| 1,2,3,5-Tetramethylbenzene | 16 |
| Toluene | 12, 13, 14, 16, 17, 18, 19, 20, 21 |
| Tri-n-Butyl Citrate | 37 |
| Tri-n-Butyltin Chloride | 40 |
| 1,1,1-Trichloroethane | 18, 19, 21 |
| Trichloroethylene | 19, 20, 21 |
| Triglyceride | 23 |
| 1,2,3-Trimethylbenzene | 12, 13, 16 |
| 1,2,4-Trimethylbenzene | 12, 13, 16 |
| 1,2,5-Trimethylbenzene | 12, 13 |
| 1,3,5-Trimethylbenzene | 16 |

Application Index

| | |
|-----------------------|--------------------------------|
| T | |
| 2,3,5-Trimethylphenol | 38, 39 |
| 2,3,6-Trimethylphenol | 38, 39 |
| 2,4,6-Trimethylphenol | 38, 39 |
| V | |
| iso-Valeric Acid | 24 |
| Vanillin | 31 |
| X | |
| <i>m</i> -Xylene | 12, 13, 16, 17, 18, 19, 20 |
| <i>o</i> -Xylene | 12, 13, 16, 17, 18, 19, 20, 21 |
| <i>p</i> -Xylene | 12, 13, 16, 17, 19, 20, 21 |
| 2,3-Xylenol | 38, 39 |
| 2,4-Xylenol | 38, 39 |
| 2,5-Xylenol | 38, 39 |
| 2,6-Xylenol | 38, 39 |
| 3,4-Xylenol | 38, 39 |
| 3,5-Xylenol | 38, 39 |
